## ELECTRON TUBES 1988/89

### ABRIDGED DATA AND EQUIVALENTS INDEX

## WHICHEVER WAY YOU LOOK AT IT ... IT'S A CONSIDERABLE ACHIEVEMENT

Winning two Queen's Awards for Technological Achievement is an honour of which we are justifiably proud. Both awards were given jointly to EEV in association with the Detector Research Division, Royal Signals and Radar Establishment of the Ministry of Defence. EEV's Light Conversion Devices Division won the first award for the development of Third Generation Image Intensifiers for night vision applications. The second presented in recognition of the work by the Electronics Division. This involved the development of Pyroelectric Vidicon Thermal Imaging Tubes and the highly acclaimed Thermal Imaging Camera.

# EEV ABRIDGED DATA 1988/9

This book gives characteristics of more than 1300 types of electron tubes, accessories and related products manufactured by EEV. Since the 1986/87 catalogue was issued, more than 280 new types have been introduced as a result of our continuing programme of research and development. Also included are those types formerly manufactured by M-OV and now available from EEV

## How to Use the Book

Entries are grouped by product section, each section having its own index tab for easy access. Within each section the product range is divided into different classes of device and, where necessary, subdivided by application, frequency range or cooling system for example. The comprehensive Equivalents Index shows all the tubes for which EEV offers replacements, the place of manufacture (Chelmsford, Witham or Lincoln) and the page on which data for our replacement appears.

Overseas orders or enquiries should be addressed to the appropriate office, distributor or representative in the territory.

UK orders or enquiries should be addressed to Chelmsford, Witham or Lincoln as indicated.

You may wish to use the postcards provided at the end of this book – these are post-free in the UK. Full data sheets are available on request. We can also add your name to our free mailing service.

## Enquiries for Non-Listed Products

We welcome all enquiries you may have for products not shown in this new catalogue. At the present time, as stated, we have a very large development program and we would be more than pleased to consider developing a product specifically for your individual needs.

Whatever your requirements you may be assured of high level customer service at all times.

## Abridged Data

The following pages give abridged data for the current range of EEV tubes, devices and accessories.

Comprehensive data sheets giving operating conditions, characteristic curves, and outline drawings are available on request.

Certain types listed in this catalogue may not be available from current production and their supply may be subject to a minimum order quantity. Enquiries for special tubes not included in the catalogue are welcome.

## Caractéristiques Abrégées

Dans les pages suivantes sont données les caractéristiques abrégées pour la gamme courante de tubes, dispositifs et accessoires EEV.

Des fiches de caractéristiques établissant les conditions de fonctionnement, les courbes et les schémas d'ensemble sont disponibles sur demande.

Certains types mentionnés dans ce catalogue peuvent ne pas être disponibles parmi les produits de production courante et leur livraison peut être sujette à la commande d'une quantité minimum. Nous répondons également aux demandes de renseignements pour les tubes spéciaux non mentionnés dans ce catalogue.

## Kurzgefaßte Daten

Auf den folgenden Seiten finden Sie kurzgefaßte Daten für das gegenwärtige Herstellungsprogramm von EEV Röhren, Geräten und Zubehör.

Ausführliche Datenblätter mit Betriebsbedingungen, Leistungskurven und Maßzeichnungen sind auf Anfrage erhältlich.

Es ist möglich, daß sich einige der in diesem Katalog angeführten Positionen nicht im gegenwärtigen Produktionsprogramm befinden und daß daher deren Lieferung von einer Bestellung von Mindeststückzahlen abhängig gemacht werden muß. Anfragen wegen Spezialröhren, die nicht in diesem Katalog enthalten sind, bearbeiten wir gerne.

## Resumen Informativo de Datos

En las páginas siguientes aparece un resumen informativo de datos correspondientes a la nueva gama de lámparas, dispositivos y accesorios EEV.

Tendremos sumo gusto en facilitar, a solicitud de las partes interesadas, hojas con los datos completos, incluyendo condiciones de funcionamiento, curvas de característica y planos acotados.

Es posible que ciertos tipos detallados en este Catálogo no puedan obtenerse dentro de la línea normal de producción actual y su suministro puede estar sujeto a un pedido mínimo. Sirvanse solicitar información relativa a lámparas especiales, no incluidas en este Catálogo.

## Dati Abbreviati

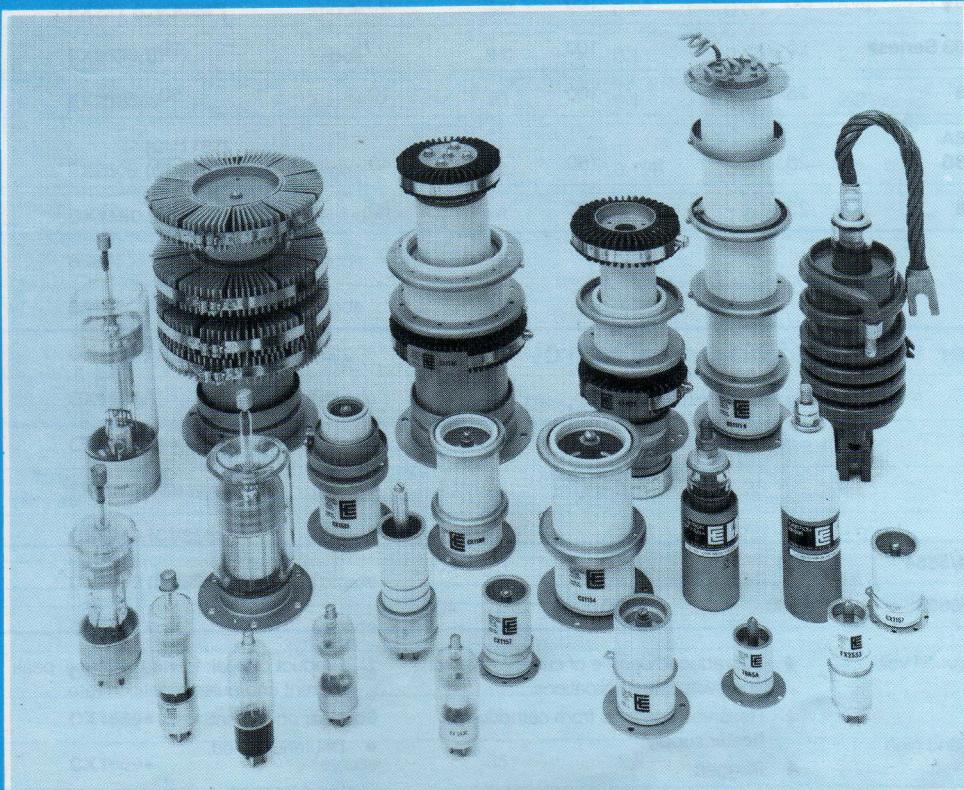

Alle pagine seguenti figurano dati abbreviati inerenti la presente serie di valvole, dispositivi ed accessori EEV.

Le pubblicazioni tecniche più approfondite, contenenti le condizioni di funzionamento, curve delle caratteristiche e disegni del contorno, vengono fornite su richiesta.

Alcuni modelli elencati nel presente catalogo non sono disponibili nella normale produzione e la relativa fornitura può essere subordinata all'ordinazione di un quantitativo minimo. Nel caso di valvole speciali non incluse nel presente testo, il cliente è pregato di interpellarci.

### Hydrogen Thyratrons for Gas Laser Switching

† Product of peak forward voltage, peak current and pulse repetition rate.

• Deuterium filled.

‡ Reservoir operates from cathode heater supply.

§ Rugged.

◆ D/E indicates double ended.

▽ High rate of rise tube for Pockel cell applications.

■ New type.

◊ Hollow anode.

**Note** Filament leads and grid connectors are available for most of the types listed above.

★ Frequency: The lower value indicates the maximum operating frequency at full rating. Operation at the higher value is possible with suitable derating.

■ New type.

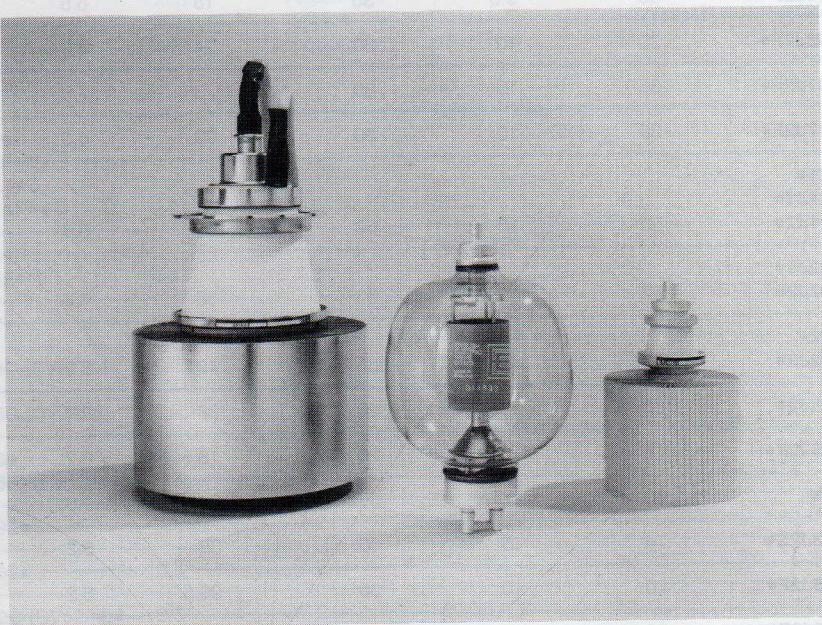

§ Under Class C unmodulated conditions.  
 ◇ Increased anode-grid capacitance.  
 ● Recommended for industrial heating service.

□ Integral filament leads.  
 △ Maintenance type, not recommended for use in new equipment.  
 ‡ Duty factor 0.2, averaging time 5 s.  
 ♦ BR1512 with mounting flange.

★ Frequency: The lower value indicates the maximum operating frequency at full rating. Operation at the higher value is possible with suitable derating.

§ Under Class C unmodulated conditions.

■ Made to special order only.  
▲ Higher power levels can be achieved with positive grid drive.

†† VHF double beam tetrode.

♦ With 2 sections in push-pull.

◊ Improved X-ray shielding.

▼ Equivalent to 4PR60C.

- † New type.
- Recommended for industrial heating service.
- ‡ Single unit, separate condenser required.
- Integral filament leads.
- ☆ Per section.

### C-Band Flanges

†† Twin tube.

‡‡ Twin tube, E-plane.

\*\* Two primers.

★ Available with various flanges.

◊ To -6 dB.

→ New type.

◆ Tunable marine radar.

† Preset to customers' requirements.

▽ The full type number will depend on the characteristics required.

\* Sensitivity time control (S.T.C.).

‡ Fault powers of up to 10 dB in excess of these levels can occur. A reverse power trip can be specified for these devices, to interrupt a TWT transmission or to prevent transmission in the case of a magnetron system. Drive circuitry is normally integrated within the device and can include built-in test (BITE) facilities, if required.

## Q(Ka)-Band Solid State Receiver Protectors

Frequency	Type	Band-width	Peak power		Mean power		Peak r.f. leakage (mW)	Maximum insertion loss (dB)	Recovery period to -3 dB (μs)	
			Active (kW)	Passive (W)	Active (W)	Passive (W)				
Q-Band†	<b>BS66</b>	3%	—	1000	—	10	1.2	50	1.0	0.2
Q-Band†	<b>BS68</b>	3%	10	100	12	2.0	1.4	25	1.5	0.4
Q-Band†	<b>BS75</b>	2%	10‡	—	100	—	1.25	50	1.3	0.1
Q-Band†	<b>B5SS222-▽</b>	10%	1.0‡	—	100	—	1.4	100	2.5	0.1

All Q-Band Receiver Protectors have plain flanges to mate with UG-599/U.

## W-Band Receiver Protectors

Frequency range (GHz)	Type	Peak power (kW)	Maximum spike leakage (nJ/pulse)	Maximum V.S.W.R.	Maximum insertion loss (dB)	Maximum recovery period to -3 dB (μs)
75–100☆	<b>BS209-▽</b>	2.0	0	1.5	2.0	0.1
75–100☆	<b>BS2095</b>	6.0	10	1.5	2.5	0.4

All W-Band Receiver Protectors mate with UG-387/U.

▽ The full type number will depend on the characteristics required.

† Preset to customers' requirements.

☆ Bandwidth 1 GHz.

‡ New type.

‡ Fault powers of up to 10 dB in excess of these levels can occur. A reverse power trip can be specified for these devices, to interrupt a TWT transmission or to prevent transmission in the case of a magnetron system.  
Drive circuitry is normally integrated within the device and can include built-in test (BITE) facilities, if required.

## Tunable Cavity Filters

Frequency range (MHz)	Type	Waveguide size	Q factor	Used with tube type
S-Band	<b>B7FR1052</b>	WG10	—	Any
9255–9565	<b>BS888</b>	WG16	240	BS810

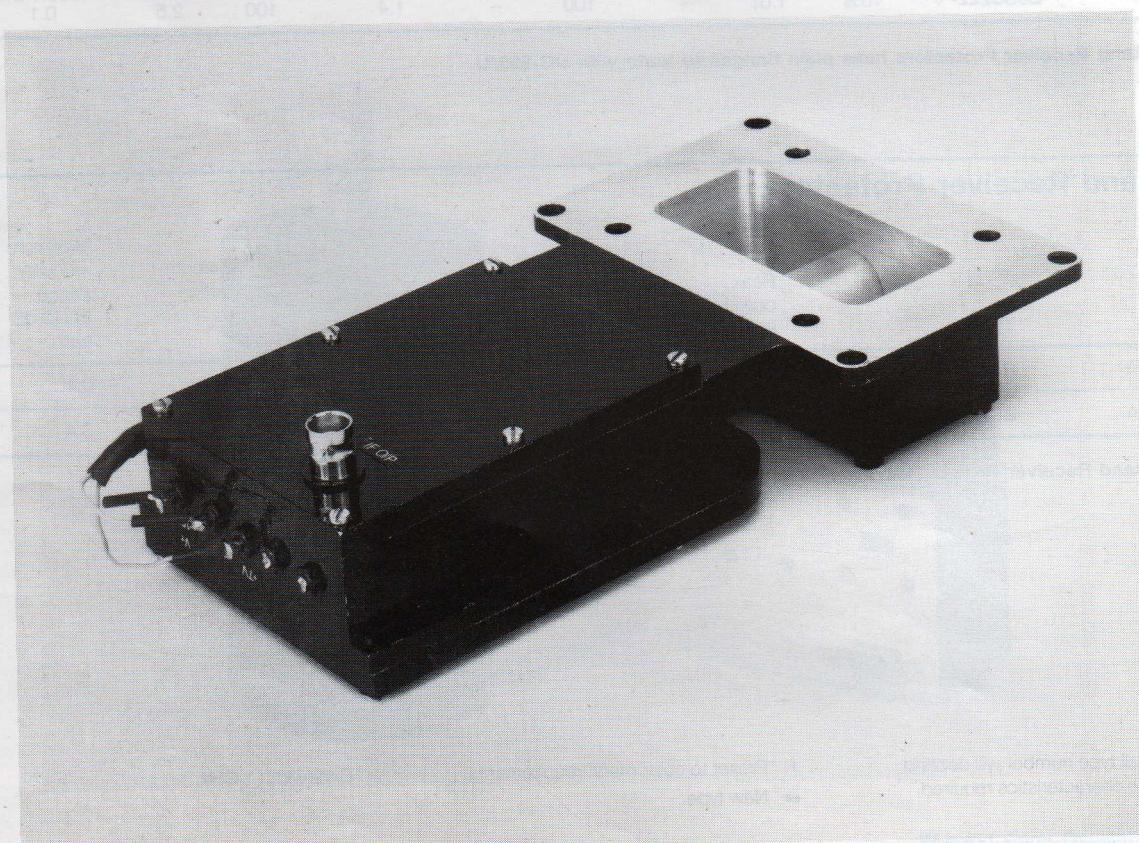

## Low Pass Filters

Pass band (MHz)	Type	Waveguide size	Rejection band (MHz)	Typical rejection (dB)
2700–3100	<b>B7FR1001</b>	WG10	5400–11000	50
5200–5900	<b>B7FR1201</b>	WG12	10000–18000	50
8500–9000	<b>B7FR1601</b>	WG16	9800–18000	20
9000–9600	<b>B7FR1602</b>	WG16	10800–13000	50

## Band Pass Filters

S-Band	up to 10%	WG10	< 1.0	30
C-Band	up to 10%	WG12	< 1.0	30
X-Band	up to 10%	WG16	< 1.0	30
J-Band	up to 10%	WG18	< 1.0	30

S-band Low Noise Receiver B7RX1000

## R.F. Heads

EEV supplies a range of compact r.f. heads in the frequency range 1.0 to 18 GHz, for applications ranging from marine radar to sophisticated military systems. The r.f. head can be supplied complete with magnetron, duplexer (conventional 'T', balanced or circulator), TR limiter or solid state protector, balanced or single-ended mixer, local oscillator (Gunn diode or transistor, depending on frequency) and i.f. amplifier. A.F.C. and a.g.c. facilities can be included if required. Waveguide and coaxial output are available.

All systems are designed by EEV to meet customers' specific requirements and are delivered fully assembled and tested.

## High Power R.F. Heads

Frequency	Type	Peak power (kW)	Maximum pulse duration (μs)	Maximum duty cycle
S-Band	<b>BS1008</b>	700	1.0	0.001
C-Band	<b>BS1009</b>	700	1.0	0.001
X-Band	<b>BS1024</b>	200	1.0	0.001

## Marine R.F. Heads

Typical noise figures of 9 dB can be obtained with point contact mixer diodes. Low noise mixer diodes can give noise figures down to 7.5 dB.

Frequency (MHz)	Type	Magnetron	Power (kW)	Duplexer	TR tube	Limiter	Mixer	Local oscillator
3040–3060	<b>BS1002</b>	MG5223	30	BS748	BS894	BS169	BS583	BS305
3040–3060	<b>B3RH1000 series</b>	MG5223	30	BS1074	solid state protector		BS589	BS311
9300–9500	<b>B3RH1600 series</b>	up to 25 kW	up to 25	waveguide or coaxial	solid state protector	*	*	B3LO1600 series

## Marine Duplexer Limiters

Frequency (MHz)	Type	Magnetron	Power (kW)	Duplexer	Protector
9300–9500	<b>B3DL1600 series</b>	up to 25 kW	up to 25	waveguide or coaxial	solid state

## Low Noise Receiver Systems

Low noise receiver systems, suitable for use with marine and other radars, have been developed at S-, C- and X-band.

A typical S-band unit consists of a waveguide input feeding a coaxial low pass filter, followed by a two-stage active or passive limiter, then a low noise GaAs FET amplifier. A double balanced image rejection mixer and an electronically tunable local oscillator complete the assembly. The i.f. output at 60 MHz typically has a noise figure of 2.5 dB, overall gain of 6 dB and input gain compression point of -5 dBm.

## Low Noise Receivers with I.F. Pre-amplifiers, Logarithmic Amplifiers and A.F.C.

Complete front end systems including i.f. preamplifier, logarithmic amplifier with up to 100 dB dynamic range and a.f.c., are being developed as integrated assemblies. The a.f.c. is a digital design capable of locking within 1 MHz on pulses containing as few as two cycles of i.f. waveform, and with a low noise output even on pulse durations down to 50 ns. Lock indication is also provided, which can be used as a tuning indicator if the a.f.c. is not used. The complete system can offer a noise figure of less than 3 dB; i.f. preamplification and bandwidth specifications can be tailored to customer requirements.

■ New type.

\* The duplexer, TR tube, limiter and mixer are integral units.

## Marine Local Oscillators

Centre frequency (MHz)	Type	Output power max (mW)	Tuning range		Input supplies		Temp. coeff. (kHz/°C)	Flange (see page 29)

\* New type.

\* When used with BS894 TR tube.

† Lightweight isolator with integral 5 W load. All circulators listed are available with additional loads if required.

‡ Light weight isolator with integral 5 W load. All circulators listed are available with additional loads if required.

★ Lightweight, 4-port circulator, also available with similar specification anywhere within J-band frequency range. High peak power versions also available.

★ The power handling capability quoted is for unpressurized waveguide with fan assisted cooling or with heat sink. Higher power handling capability is possible with improved cooling.

‡ Return loss typically improves by 3 dB over temperature range 0 °C to +50 °C.

## Ferrite Devices

A range of junction circulators is available, designed for high power applications. Mechanical features can be modified to accommodate specific customer requirements and they are available as isolators, 4-port circulators or integrated with other r.f. components to perform various functions. The following table illustrates typical performance of individual components, measured at room temperature, which can be maintained in an integrated assembly.

Frequency range (GHz)	Type	Bandwidth (%)	Peak power (kW)	Mean power (W)	Insertion loss max (dB)	Return loss min (dB)‡	Operating temperature range (°C)
2.9–3.2	<b>B7JC1010</b>	10	30	750	0.3	25	–30 to +55
2.9–3.1	<b>B7JC1013</b>	7.0	100	750	0.3	22	–30 to +55
5.2–5.7	<b>B7JC1210</b>	10	30	500	0.3	21	–30 to +55
8.9–9.7	<b>B7JC1619</b>	9.0	100	300	0.3	21	–45 to +85
9.3–9.5	<b>B7JC1622</b>	3.0	100	300	0.25	25	–45 to +85
9.5–9.7	<b>B7JC1625</b>	3.0	100	300	0.25	25	–45 to +85
9.0–10	<b>B7IS1602†</b>	10	100	100	0.25	21	–45 to +85
10.0–10.5	<b>B7JC1615</b>	5.0	100	300	0.25	25	–45 to +85
13.5–14.5	<b>B7JC1814</b>	7.0	0.5	300	0.25	21	–45 to +85
13–15	<b>B7JC1820☆</b>	15	0.5	150	0.25	21	–45 to +85

## X-Band Differential Phase Shift Circulators

These 4-port devices have been designed to handle higher levels of peak and mean power than junction circulators. Size, weight and insertion loss characteristics have been minimized. As with the junction circulators, the frequency of operation may be adapted to customer requirements.

9.3–9.6	<b>B7PC1612</b>	3.0	250	700★	0.4	25	–45 to +85
9.0–9.6	<b>B7PC1621</b>	6.0	250	700★	0.5	21	–40 to +70

## Terminations

Typical performance of terminations currently manufactured. EEV will be pleased to advise for specific applications.

Frequency range (GHz)	Type	V.S.W.R.	Peak power (kW)	Mean power (W)	Length (mm)	Flange

C-Band (4.0–6.0 GHz)	<b>B7DC12--</b>	10	>35	20	0.25

## Transmission Line Pressure Windows

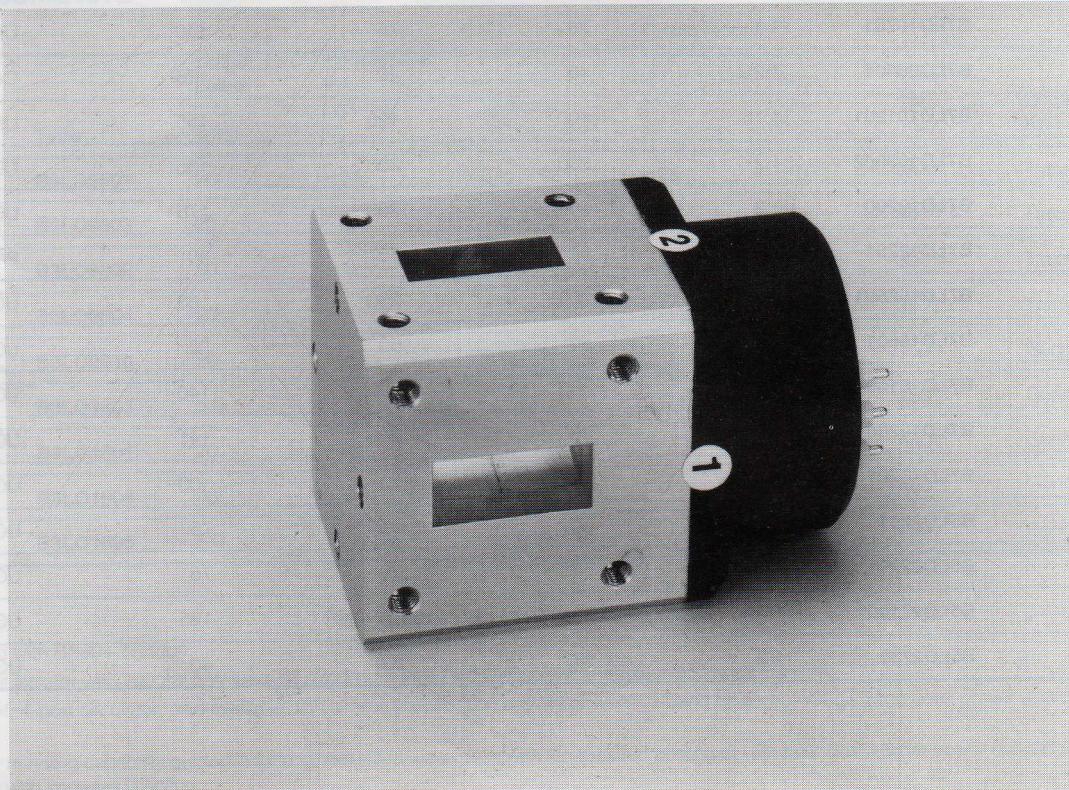

Glass-to-metal resonant windows as used in duplexer tubes can be supplied for application where a gas pressure differential is to be maintained in a waveguide system, with a high degree of transparency to microwave signals.

The windows listed below may be sealed into a socket with soft solder or a conducting epoxy resin. Windows required to be soldered will be supplied ready tinned to customer requirements on request.

The maximum peak power transmission capability of the window is dependent on the waveguide pressure differential. The maximum capability specified below applies to operation in air at atmospheric pressure. It increases considerably at higher pressure differentials.

Resonant frequency (MHz)	Type	Bandwidth at v.s.w.r. 1.2:1 (MHz)	Peak power max (kW)	Resonant frequency (MHz)	Type	Bandwidth at v.s.w.r. 1.2:1 (MHz)	Peak power max (kW)

X-band Waveguide Switch B7SW1648

## Waveguide Switches

EEV produces a range of rotary waveguide switches covering frequencies from 1.12 GHz through to 40 GHz. Options include two or three channel rotors, manual or automatic versions, remote indication of switch position (tell-back), latching or fail-safe and manual over-ride on automatic switches.

Applications include automatic and manual test systems; land based, marine and airborne radars; satellite earth stations.

### † Features

- A Automatic
- B miniature housing
- C Special knob
- K<sub>1</sub> Single lock position
- K<sub>2</sub> Two lock positions
- M Manual operation
- N No lock position
- T Tell back

All switches for automatic operation require a 28 V drive (except B7SW0610); alternative drives are available on request.

‡ Motor drive supply to be specified by the customer

§ New type.

▽ The full type number will depend on the characteristics required.

## Power Supplies for Solid State Noise Generators

These current stabilized power supplies operate from 50/60 Hz 110/240 volt mains input. EEV will be pleased to offer alternative inputs to meet specific requirements.

Type	Description
<b>BS690A</b>	An output current meter is incorporated and the unit is capable of pulsed operation when connected to a suitable pulse generator.
<b>B3ED9902</b>	The built in pulse generator has variable pulse duration and a variable delay from an external synchronising input. An external current meter can be connected.
<b>B3ED9920</b>	An output current meter is not incorporated, but an external meter can be connected.

## Solid State Noise Generators – Coaxial

Frequency range (MHz)	Type	Excess noise ratio (dB)	Output connector	Operating current (mA)	Typical voltage (V)	Transmission or terminated
1000–4000	<b>BS644</b>	27	N	15	21	Terminated
2990–3110	<b>BS788</b>	37 min	N	3.0	21	Terminated
2700–3500	<b>BS762</b>	32	N	10	21	Terminated
2900–3500	<b>BS766</b>	36	SMA	25 max	28	Terminated
3000–3500	<b>BS698</b>	27	N	15	21	Terminated
1000–10000	<b>BS646</b>	16	N	20	22	Terminated
9500–10000	<b>BS752</b>	36	SMA	30	22	Terminated

All EEV noise generators are calibrated against standards which are relatable to National Physical Laboratory Standards. Waveguide mounted units can be supplied with power monitoring capability for performance monitoring applications. Coaxial units can be supplied with a choice of r.f. connector; S.M.A., T.N.C., type N etc. Power supplies can be integrated within the noise generator and temperature compensated noise generators can be supplied for the most exacting requirements.

EEV will be pleased to advise on the best choice of solid state noise generator for specific applications.

## Noise Tubes and Mounts

Frequency range (MHz)	Mount type	Tube type	Excess noise ratio (dB)	Waveguide size 153 IEC-	Operating current (mA)	Typical voltage (V)	Power supply type
7000–10000	<b>BS638</b>	BS342	15.7	R84	125	79	BS610B
8500–10000	<b>BS642</b>	BS342	15.7	R100	125	79	BS610B
12400–18000	<b>BS696</b>	BS342	15.7	R140	125	79	BS610B
33000–36000	<b>BS606</b>	BS386	16.4	R320	100	48	BS610A
33000–36000	<b>BS620•</b>	—	16.4	R320	100	48	BS610A

EEV advises the purchase of tubes and mounts as integral units. BS610 series current stabilized power supply units have automatic filament pre-heat and starting circuits and incorporate an output current meter.

## Monitor Diodes

Typical applications include the continuous monitoring of r.f. power, the direct viewing of r.f. power pulse envelopes and the detection of irregularities in magnetron or modulator performance.

Frequency range (MHz)	Type	Peak input power (max) (kW)	Mean input power (max) (W)	Pulse duration (max) (μs)	Diode load (Ω)	V.S.W.R. (max)	Mount
2500–6500	<b>BS510 (CV6107)</b>	20	18	15	68	1.5	BS514, BS516 BS522, BS524 BS526, BS530 BS532, BS534
5200–5500	<b>BS540</b>	20	18	15	68	1.3	BS538
8500–9000	<b>BS536</b>	20	20	15	47	1.3	BS528
8500–10000	<b>BS502 (CV6005)</b>	20	18	2.0	68	1.3	BS512 BS546

**Note** Monitor diode power supplies type BS602A and BS602C, or power supply and indicator unit type BS600 are available for use with the above types.

## Monitor Diode Kits

Type	Description
<b>BS614</b>	The kit is intended for field tests of X-band radar transmitter performance. It is based on a monitor diode and permits measurement of peak output power, pulse parameters and irregularities in the transmitter performance. The kit includes a calibrated monitor diode and mount assembly, power supply, directional couplers and accessories to suit the user's requirements, all packed in a fitted carrying case. An oscilloscope and mains power source are the only additional facilities needed.
<b>BS504</b>	Similar to BS614, with different ancillaries and with solid state noise generator for noise figure measurements.
<b>BS611</b>	The kit includes a calibrated monitor diode, mount assembly, power supply, 3 dB waveguide attenuator and accessories, packed in a fitted carrying case. It is intended for measurements on radars with peak output powers up to 30 kW in the frequency range 9200 to 9500 MHz.
<b>BS615</b>	Similar to BS611 but for peak power levels up to 60 kW.
<b>BS612</b>	The kit includes a calibrated monitor diode and mount assembly, power supply, directional couplers and accessories to suit the user's requirements, all packed in a fitted carrying case. It is intended for use on radars with peak output powers from 10 to 100 kW, in the frequency range 9200 to 9500 MHz.

► New type.

★ Integral power supply.

† A range of devices also providing power measurement.

● BS620 is supplied with noise tube BS386 but calibrated to an accuracy of ± 0.1 dB.

All klystrons can be supplied with various mounting methods, e.g. flange, flange with connector, SMA, TNC, type-N etc.  
 Power supplies can be integrated within the power assembly and temperature controlled.

EMI filters can be fitted to ensure only the specified levels of noise are emitted.

### Power Klystron Cooling

1. Forced-air cooled.
2. Water cooled.
3. Vapour cooled.

‡ Bandwidth 8 MHz.

† Bandwidth 6 MHz.

♦ Collector may be either vapour or water cooled according to circuit assembly used.

□ At klystron output flange.

△ Maintenance type, not recommended for use in new equipment.

◆ Incorporates a Beam Control Device.

■ New type.

## Accessories and Magnets for Linear Accelerator Magnetrons

Type	Description	Used on
<b>M4117</b>	Circular to rectangular waveguide transition section for 2.0 MW linear accelerator magnetrons.	M5125, M5125X, M5167, M5193, MG5260
<b>M4119</b>	Circular to rectangular waveguide transition section for 2.0 MW linear accelerator magnetrons.	M5125, M5125X, M5167, M5193, MG5260
<b>M4121</b>	Water cooled electro-magnet and launching section.	M5028
<b>M4152B</b>	Circular to rectangular waveguide transition section for 2.0 MW linear accelerator magnetrons.	M5125, M5125X, M5167, M5193, MG5260
<b>M4169</b>	Circular to rectangular waveguide transition section for 2.0 MW linear accelerator magnetrons.	M5125, M5125X, M5167, M5193, MG5260
<b>M4227</b>	Microwave and X-ray radiation absorber for 2.0 MW linear accelerator magnetrons.	M5125, M5125X, M5167, M5193, MG5260
<b>M4261</b>	Electro-magnet for use with linear accelerator magnetron.	MG5260
<b>MA761</b>	Microwave and X-ray radiation absorber.	M5028
<b>MG4253</b>	Electro-magnet for use with linear accelerator magnetron.	MG5260

### Airflow Cooling

- ¶ Mechanically tuned over 15 MHz, centre frequency within this range.
- ☆ Encapsulated to reduce stray radiation.
- ◊ 30 kW under matched load conditions.

- † Mechanically tuned over the specified frequency range.
- Made to special order only.
- \*\* Coaxial magnetron.

- ★ See Magnetron Accessories section on page 49.
- ◆ Improved tuner mechanism.
- ☛ New type.

250 kW S-band Tunable Magnetron MG5344

◆ Quick heat cathode.

■ Any spot frequency  $\pm 50$  MHz within the range.

★ Encapsulated to reduce stray radiation.

† Operable at high altitude.

◆ Mechanically tuned over the specified frequency range.

■ Made to special order only.

\*\* Coaxial magnetron.

★ See Magnetron Accessories section on page 49.

◆ Improved tuner mechanism.

■ New type.

## Microwave Transmitters – X-Band

A series of rugged, miniature, pulsed X-band transmitters. Some types operate at fixed pulse duration and pulse repetition frequency selected by the customer (EMPTX type numbers); others deliver a pulse burst (i.e. a train of pulses) controlled by an externally generated TTL (or compatible) input signal (EMBTX type numbers). The transmitters operate at fixed frequency unless otherwise stated and can be supplied to operate within 100 MHz or any specified frequency within the given ranges.

Type	Frequency range (GHz)	Output power (W)	Typical Operation			
			Duty cycle	Operating voltage (V)	Warm-up delay (s)	Weight (g)
EMPTX101	9.0–10.5	200	0.005	24	2.0	300
EMBTX104	9.0–10.5	200	0.005	24	2.0	300

## Magnetron Accessories and Magnets

Type	Description	Used on
M4011	Water cooled electro-magnet, including launching section M4017, for 2.5 MW S-band magnetrons.	M566, M569, M570, M579, M5133, M5134, M5135, M5136
M4016	Circular to rectangular waveguide transition section for L-band magnetrons.	M554, M586, M5169
MA228	Magnet for S-band fixed frequency magnetrons.	4J31–35, 4J43, 4J44, 4J53, M577B, M578B, M595B
MA244	Magnet for S-band tunable magnetrons.	5586, 5657, M5035, M5114B, M5162, M5170, MG5236, MG5237
MA297	Magnet for L-band magnetrons.	M5051, M5052, M5086, M5087, MG5201
MA297A	Magnet for L-band magnetrons.	M5051, M5052, M5086, M5087, MG5201
MA311	Thermal fuse for L-band magnetrons.	M5051, M5052, M5086, M5087, MG5201, MG5216, MG5263, MG5283
MA339	Magnet for tunable L-band magnetrons.	MG5216, MG5263, MG5283
MA406	Magnet for fixed frequency L-band magnetrons.	M554, M586, M5169
MA445	Current transformer for measuring pulse currents.	Types with up to 15 A peak anode current
MA924A	Thermal fuse for S-band coaxial magnetrons.	MG5202, MG5204, MG5206, MG5282, MG5284, MG5298, MG5309

- ◆ Frequency agile.
- † Mechanically tuned over the specified frequency range.
- △ Maintenance type, not recommended for use in new equipment.

- § Rugged.
- ‡ Pulsed anode.
- ◊ Quick heat cathode.
- \*\* Coaxial magnetron.

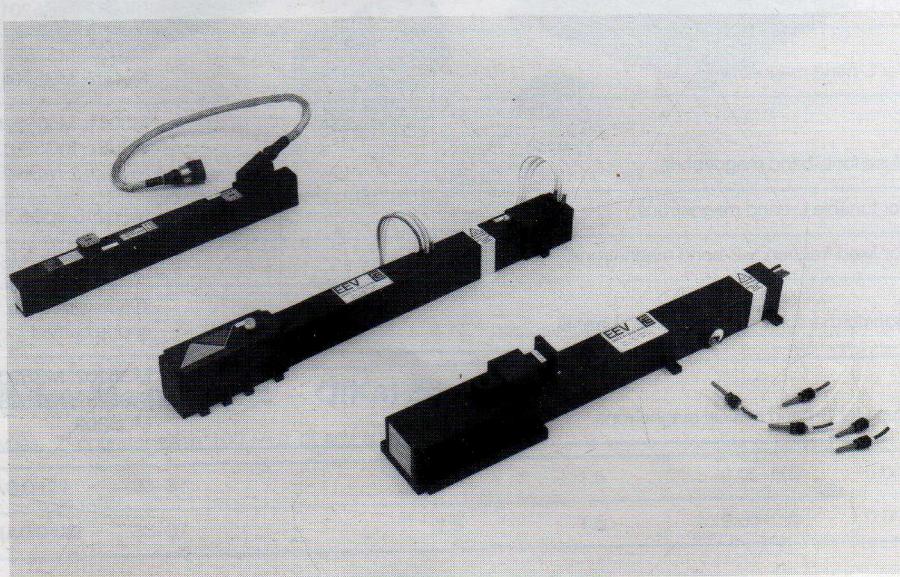

- ▲ Lightweight magnet.
- ◊ Precision tuned.
- New type.

## Broadband C.W. Travelling Wave Tubes for ECM

Increased bandwidth, efficiency and gain are characteristic of recent additions to this range which extends from 2.5 to 40 GHz. The rugged construction of these tubes ensures stable performance with high reliability when operated under severe environmental conditions. Beam switching is achieved by means of a focus electrode or shadow grid.

Frequency range (GHz)	Type	Output power (W)	Gain (dB)	Helix voltage (kV)	Collector		Output connector	Weight (kg)

Broadband ECM Tubes N10043 (left), N10063 (centre) and N10053 (right)

\* New type.

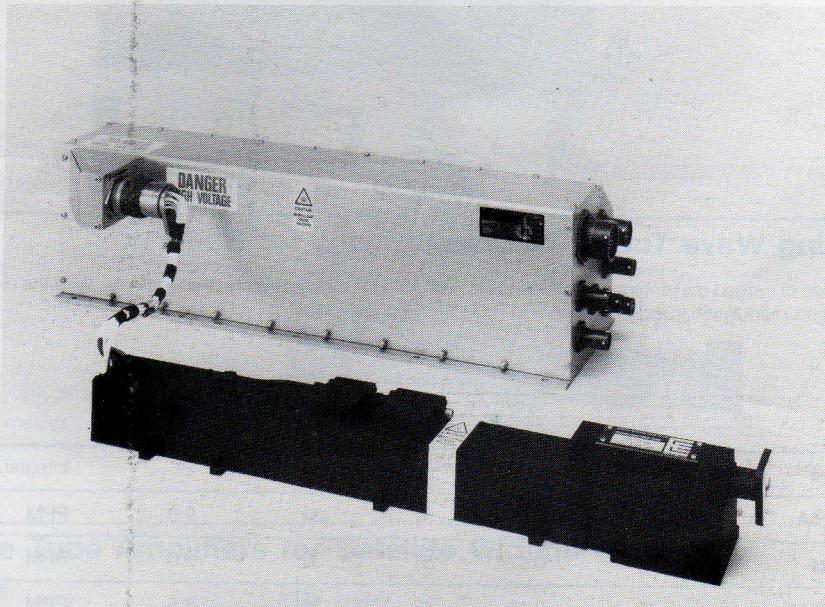

\*\* High efficiency dual collector tube.

## Broadband C.W. Travelling Wave Tube Chains for ECM

Each chain consists of two tubes combined with other microwave components to form a single high gain unit of relatively short length. A range of modulation facilities can be included. The use of a T.W.T. for the driver stage eliminates the need for high gain in the output tube, giving reduced noise output under certain operational conditions. Chains can be configured to provide optimum performance for specific customer requirements.

Frequency (GHz)	Type	Tubes	Output power (W)	Drive power (dBm)	Collector		R.F. connectors

Power Supply N4277 with TWT

## Broadband Travelling Wave Tube Amplifiers for ECM

A range of amplifiers and sub-systems can be offered comprising various travelling wave tubes, power supplies and additional components to suit specific requirements. The types shown below provide an indication of existing standard types. Enquiries for amplifiers and sub-systems designed for individual applications are welcomed.

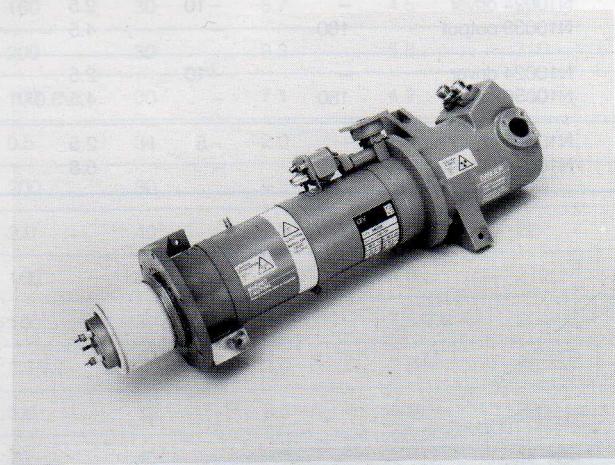

Type	Description
<b>N4277</b>	A rugged high voltage power supply designed for use with high efficiency travelling wave tubes such as the N10053 and N10063 covering the frequency range 2.5 to 18 GHz. A microprocessor-based control system provides extensive control and monitoring facilities. It is conduction cooled and is designed for use in very severe environments including airborne applications.
<b>N4282</b>	A broadband c.w. amplifier comprising a miniaturized travelling wave tube chain and power supply packaged into a single low volume unit. The r.f. output power is 100 W minimum over the frequency range 7.5 to 18 GHz with a gain in excess of 60 dB. The frequency range may be extended to 6.0 to 18 GHz with reduced output power. Prime power and cooling for the amplifier can be provided by an optional rechargeable battery pack and cooling unit. Features include – compact size, easily transportable; rugged construction; simple operation; low cost; optional battery pack.

## Pulsed Travelling Wave Tubes, Helix and Ring-Bar, for Radar and ECM

Pulsing of the higher power tubes in this range is achieved by means of precision-manufactured shadow grids. Low close-to-carrier noise, essential in modern pulse Doppler radars, is ensured by rugged gun construction which maintains grid-cathode spacing within close limits under extreme operating conditions.

Frequency range (GHz)	Type	Peak output power (W)	Duty cycle	Gain (dB)	Collector		Output R.F. connector	Cooling
					Voltage (kV)	Current (mA)		
3.0–3.5	<b>N10051</b>	2500	0.11	45	6.5	1500	Type N	Forced-air

High Efficiency, Dual Collector, Coupled Cavity TWT Type N10559

## Pulsed Travelling Wave Tubes, Coupled Cavity, for Radar

The range consists of tubes of rugged metal/ceramic construction, designed for mobile military environments. With the exception of the N1061, they employ high  $\mu$  shadow grid modulation suitable for modern multi-function radars.

Frequency range (GHz)	Type	Peak output power (kW)	Duty cycle	Gain (dB)	Beam voltage (kV)	Beam current (A)	Focus system	Cooling

## Travelling Wave Tube Amplifiers for Test and Instrumentation

The following Travelling Wave Tube Amplifiers are housed in standard 19-inch rack mounting instrument cases and operate from 240/115 V, 50/60 Hz single phase prime power. A range of additional optional features is available, including a pre-amplifier. Values stated for gain and noise factor apply without pre-amplifier.

Frequency range (GHz)	Type	Output power (W)	Gain (dB)	Noise factor (dB)	Height (mm)	Depth (mm)	Approx weight (kg)

## Leddicons for X-ray Image Intensifier Service

Type*	Alternative number	Description
<b>1-inch (25 mm)</b>		
XQ1072	P8022X	Front loading, light bias via tube socket, no anti-halation disc.
XQ1073X		Version of XQ1072 with BG18 anti-halation disc for flare reduction.
XQ2172/02	P8496X	Rear loading, diode gun tube, light bias via tube socket, standard anti-halation disc.
XQ2172/03	P8490X	Front loading, diode gun tube, light bias via tube socket, no anti-halation disc.
XQ2172/03X		Front loading, diode gun tube, light bias via tube socket, BG18 anti-halation disc.
XQ2182/02	P8496TX	Version of XQ2172/02 with thin target layer for higher signal current.
XQ2182/03	P8490TX	Version of XQ2172/03 with thin target layer for higher signal current.
<b>30 mm</b>		
P8452X		High resolution diode gun tube, low output capacitance (L.O.C.), high signal current, 20 mm image diameter.
P8456X		High resolution diode gun tube, low output capacitance (L.O.C.), high signal current, 24 mm image diameter.
XQ1022		Standard 30 mm Leddicon outline, with no anti-halation disc, 18 mm image diameter.

## Infrared Leddicons

The P8029 is a 1-inch diameter Leddicon, with a new photoconductive layer sensitive from the visible into the 1–2  $\mu\text{m}$  infrared band and beyond. The tubes have triode guns with separate mesh construction and magnetic focusing and deflection; they are front loading in vidicon type cameras fitted with standard lenses. Three quality grades are available, differing in blemish and shading performance and identified by a suffix to the type number (e.g., P8029-1 is the highest grade).

## Leddicon Test Equipment

Type	Description
P4217	A 6-socket unit designed to allow lead oxide camera tubes such as the Leddicon to be conditioned periodically without using expensive colour camera equipment. Operation for a few hours each month extends tube shelf life and is beneficial to operational life. The standard unit has 6 sockets capable of accepting any version of 30 mm or 25 mm tubes. Compatible modules for 2½-inch and mixed mode tubes are available as separate options.
P4225	Custom built test facility for Leddicon type camera tubes. The basic unit is a single free-standing desk type structure, which can be fitted with equipment to test any of the EEV range of Leddicons.
P4226	Self-contained lag measuring set for Leddicons and Vidicons; can also be integrated into the P4225 test facility.

## Television Camera Tubes - $\frac{2}{3}$ -inch Vidicons Separate Mesh, Magnetic Focus and Deflection

Type	Application	Features	Blemish standard	Heater current at 6.3 V (mA)	Photo-surface (see page 64)
P8037■	Compact colour and monochrome cameras for industrial, educational and surveillance applications.	High sensitivity and short lag. Compact construction.	Commercial	95	ii
P8250■	Very small cameras for pipe inspection and surveillance.	Very short (65 mm) tube with flying leads. For use in EEV focus and deflection yoke MA584D. Silicon diode array target.	†	95	vi

Vidicons P8250, P8037, 8134V1

## Television Camera Tubes - $\frac{2}{3}$ -inch Rugged Vidicons Separate Mesh, Magnetic Focus and Deflection

Type	Application	Characteristics	Blemish standard	Heater current at 6.3 V (mA)	Photo-surface (see page 64)
P8209	Military and industrial involving shock and vibration.	Integral focus and deflection coils. Overall diameter 1 inch approx.	†	95	ii
P8216	Military and industrial involving shock and vibration.	Short tube, 91 mm overall length.	†	95	ii
P8251■	Military and industrial involving shock and vibration.	Similar to P8216 but with silicon diode array target.	†	95	vi
P8252■	Military and industrial involving shock and vibration.	Similar to P8216 but with silicon diode array target bonded to faceplate.	†	95	vi
P8253■	Military and industrial involving shock and vibration.	Similar to P8209 but with silicon diode array target bonded to faceplate.	†	95	vi

## Television Camera Tubes – 1-inch Vidicons

### Separate Mesh, Magnetic Focus and Deflection

Type	Derivative	Application	Characteristics	Blemish standard	Heater current at 6.3 V (mA)	Photo-surface (see page 64)
8541A (P842)		Broadcast, educational and high quality industrial.	High sensitivity at all light levels. Moderate sensitivity to red up to 900 nm. Short lag.	1st Grade	95	ii
	8541F	Direct coupling to image intensifiers and converters.	Fibre-optic faceplate, limiting resolution 900 TV lines.	†	95	ii
P849		Industrial and educational.	High sensitivity and short lag. Relaxed blemish specification.	Commercial	95	ii
8541/ P849D		Low cost industrial and surveillance.	P849 with relaxed specification.	Industrial	95	ii
P842X		Medical use in conjunction with X-ray sensitive image intensifier.	Photosurface selected to match intensifiers with P20 phosphor output. Short lag.	†	95	ii
8572A (P843)		Colour or monochrome telecine and caption scanning. Can be selected for use in PE24 and PE240 cameras. Available with anti-halation faceplate stud.	High sensitivity but very short lag at high light levels. Resistant to image retention.	1st Grade	600	i
P844		Colour or monochrome telecine and caption scanning.	Low power heater version of 8572A (P843).	1st Grade	95	i
P844X		Medical use in conjunction with X-ray sensitive image intensifier.	Medium lag for integration of intensifier noise.	†	95	v
P8030		Colour or monochrome telecine, caption scanning; educational.	Version of 8541A with 300 mA heater.	†	300	ii
P8031		Industrial and educational.	High sensitivity and short lag. For use in cameras requiring 300 mA heater.	Commercial	300	ii
P8034A		Radar screen viewing. Low light level surveillance where scene motion is limited.	High sensitivity, long lag photocathode for normal and slow scan operation at low light levels.	†	95	iv
P8038		Colour telecine, selected for use in TK28 and similar cameras.	High sensitivity and short lag. Signal output and resolution uniform over whole raster.	1st Grade	95	ii
P8038B		Blue channel of colour telecine, selected for use in TK28 and similar cameras.	High sensitivity and short lag. Signal output and resolution uniform over whole raster.	1st Grade	95	iii
P8122		Specialized closed-circuit industrial systems.	Similar to P8125 but with overall length reduced to 5.18 inches.	†	95	vi
P8125		Specialized closed-circuit industrial systems.	Silicon diode array target, unaffected by extreme light overload and scan failure. No photoconductive lag. Low blooming. High sensitivity including near infrared.	†	95	vi
P8126		Specialized closed-circuit industrial systems.	Similar to P8125 but with improved gun giving higher amplitude response at frequencies up to 700 TV lines.	†	95	vi
P8203		Ultra high resolution medical, educational and industrial systems.	Limiting resolution in the region of 1600 TV lines.	1st Grade	95	ii
P8204		Ultra high resolution medical, educational and industrial systems.	P8203 with relaxed blemish specification.	Commercial	95	ii
P8205		Ultra high resolution medical, educational and industrial systems.	P8204 with relaxed blemish specification.	Industrial	95	ii

† Specific tube grades and electrical parameters can be negotiated.

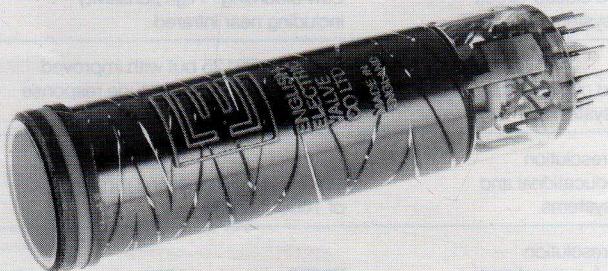

■ Made to special order only.

## Television Camera Tubes – 1-inch Rugged Vidicons

### Separate Mesh, Magnetic Focus and Deflection

Type	Application	Characteristics	Blemish standard	Heater current at 6.3 V (mA)	Photo-surface (see page 64)
P831	Military and industrial involving shock and vibration.	Short tube, electrical characteristics similar to 8541A.	†	95	ii
P831 IG	Industrial involving shock and vibration.	Rugged, industrial grade tube of reduced length. Improved replacement for 7262A when fitted with integral mesh connector clip.	Industrial	95	ii
P863‡	Military and industrial involving shock and vibration.	Developed from P831, with mesh connected to ring adjacent to target connection to eliminate pick-up by leads.	†	95	ii
P8123	Military and industrial involving shock and vibration.	Similar to P831 but with silicon diode array target.	†	95	vi
P8127	Military and industrial involving severe shock and vibration.	Short tube with silicon diode array target bonded to faceplate.	†	95	vi
P8129	Military and industrial involving shock and vibration.	Very short (4 inches–102 mm), with compact integral focus and deflection coils. Silicon diode array target bonded to faceplate.	†	95	vi
P8201	Military and industrial involving shock and vibration.	Very short (4 inches–102 mm), with compact integral focus and deflection coils.	†	95	ii
P8202	Military and industrial involving shock and vibration.	Similar to P8201 but with silicon diode array target.	†	95	vi
P8208	Military and industrial involving severe shock and vibration.	Similar to P8201 but with improved environmental specification.	†	95	ii
P8214	Military and industrial involving shock and vibration.	Short tube with integral focus and deflection coils.	†	95	ii
P8218	Military and industrial involving shock and vibration.	Short tube, electrical characteristics similar to P831.	†	300	ii
P8254	Military and industrial involving shock and vibration.	Short tube with integral focus and deflection coils. Silicon diode array target bonded to faceplate.	†	95	vi

**FPS Vidicon P8280**

■ New type.

® Registered EEV trade mark.

† Specific tube grades and electrical parameters can be negotiated.

‡ Can be purchased with scanning/focus/alignment coil assembly.

## Television Camera Tubes – 1-inch Rugged Vidicons

### Magnetic Focus, Electrostatic Deflection (FPS)

Type	Application	Features	Blemish standard	Heater current at 6.3 V (mA)	Photo-surface (see page 64)
P8280	Military and industrial involving severe shock and vibration.	Short, high resolution tube with silicon diode array target. Compact focus coil available from EEV.	†	95	vi
P8281	Military and industrial involving severe shock and vibration.	Short tube with very high resolution (1600 lines). Compact focus coil available from EEV.	†	95	ii
P8281F	Direct coupling to image intensifiers and converters.	P8281 with fibre-optic faceplate	†	95	ii

## Television Camera Tubes – 1-inch Vidicons

### Electrostatic Focus and Magnetic Deflection

Type	Application	Features	Blemish standard	Heater current at 6.3 V (mA)	Photo-surface (see page 64)
8134	Broadcast and industrial, compact monochrome.	Industrial grade tube.	†	95	ii
8134V1/ 4811	Broadcast, colour, telecine. Can be supplied in matched sets for RCA TK27 camera.	Uniform sensitivity and geometry for multi-tube colour cameras. It can be selected for use in the red, blue or green channels.	1st Grade	95	ii

## Television Camera Tubes – Pyroelectric Vidicons (Pevicons®)

Development is continuing of higher performance variants and specific enquiries are invited. The faceplate is normally germanium but other materials can be supplied. The types listed are also available with special non-parallel faceplates for infrared interferometry applications.

Type	Faceplate diameter	Application	Features
P8092	1-inch	Thermal imaging	Maximum sensitivity in the 8 to 14 micron band, with thermal resolution better than 0.2 °C. Mechanically similar to 1-inch separate mesh vidicons. Gas stabilized.
P8093	1-inch	Thermal imaging	High vacuum (hard) tube with performance similar to P8092.
P8094	1-inch	Thermal imaging	Gas stabilized tube with reticulated target giving superior spatial resolution. Electrically interchangeable with P8092.
P8220	1-inch	Thermal imaging	Similar to P8092, with overall length reduced by 26 mm.

## Television Camera Tubes – 1-inch Vidicons

### Integral Mesh, Magnetic Focus and Deflection

Requirements for integral mesh vidicons can be met using current separate mesh tubes, converted to integral mesh operation with an external shorting clip on the base.

Type	Application	Characteristics	Blemish standard	Heater current at 6.3 V (mA)	Photo-surface (see page 64)
7038	Colour or monochrome telecine and caption scanning. Can be selected for use in PE240 camera.	Medium/high sensitivity but short lag at high light levels. Resistant to image retention.	1st Grade	600	i
P862	Industrial	Medium/high sensitivity and short lag. P849D with connector for integral mesh operation.	Industrial	95	ii
P864	Industrial and educational.	High sensitivity, short lag. P849 with connector for integral mesh operation.	Commercial	95	ii

## Television Camera Tubes – 1½-inch Vidicons

Type	Application	Features	Blemish standard	Heater current at 6.3 V (mA)	Photo-surface (see below)
------	-------------	----------	------------------	------------------------------	---------------------------

### Electrostatic Focus and Magnetic Deflection

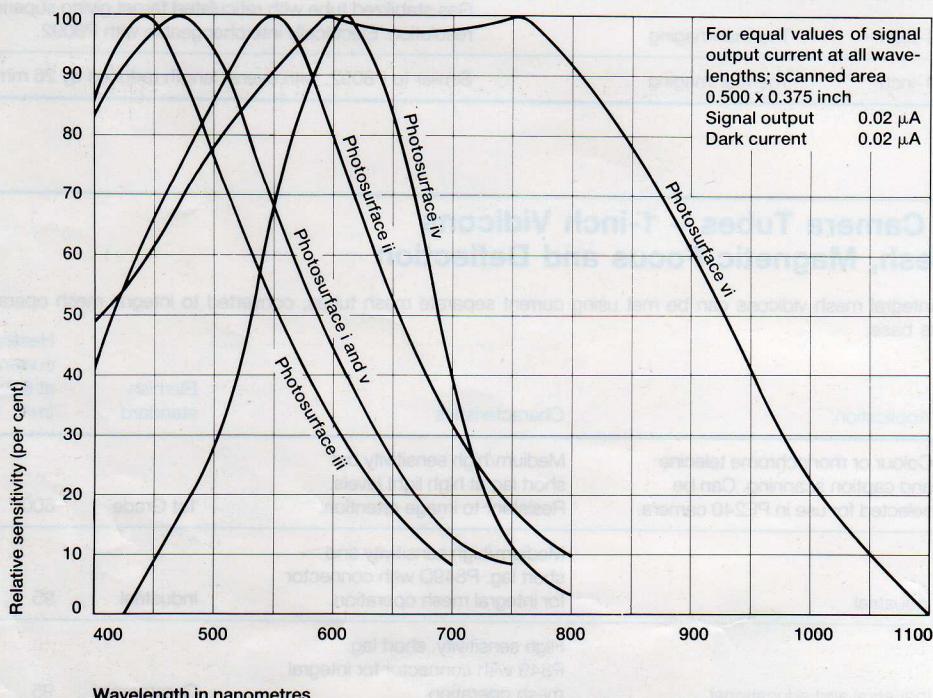

8480	Colour or monochrome cameras, telecine and high grade industrial.	Low deflection power, negligible electrostatic focusing power. Reduced camera size by eliminating focus coil. High resolution.	1st Grade	95	i
8480V1/4810	High quality colour cameras such as RCA TK27.	Similar to 8480 but tested to closer limits for signal uniformity, beam astigmatism and other characteristics.	Selected	95	i

### Separate Mesh, Magnetic Focus and Deflection

8521■	High resolution applications.	Limiting resolution in the region of 2000 TV lines. Very short lag.	†	600	ii
P8217	High resolution applications	Ultra-high and uniform resolution in suitable yoke. Mesh connection by flying lead below target flange, to eliminate pick-up.	†	600	ii

### Vidicon Photosurfaces

Type	Description
Photosurface i	High sensitivity photosurface with very short lag at high light levels. Resistant to image retention and intended for colour or monochrome telecine and caption scanning.
Photosurface ii	The colour response peaks in the green region and extends into the near infrared; near panchromatic response is obtained in daylight. This photosurface provides higher sensitivity than type i and has high sensitivity at both high and low light levels. It must not be exposed to bright lights for long periods.
Photosurface iii	This photosurface is similar in sensitivity to type ii but its colour response peaks in the blue region. It provides improved colour rendition with tungsten illumination. It has extremely short lag when used at light levels of 10–100 lux incident on the faceplate.
Photosurface iv	This photosurface has been specially designed with long lag characteristics. It is intended for integrating repetitive light inputs of low level such as from X-ray image intensifier screens or cathode ray tube displays.
Photosurface v	High sensitivity, medium lag photosurface developed for use with X-ray image intensifiers. The spectral response is very similar to photosurface iii and is well matched to P20 phosphor.
Photosurface vi	The silicon diode array target has a wide spectral response ranging from blue to infrared. The very high sensitivity in the visible and infrared, combined with its high resolution and low lag properties make it very suitable for surveillance applications, good picture quality being obtained with a target illumination of less than 0.5 lux. The red and infrared sensitivity also makes it suitable for use in the red channel of a colour camera.

## Television Camera Tubes – Image Isocons

Image Isocons are designed to provide optimum performance at low levels of scene illumination (moonlight conditions). Typical applications include – Night time detection and reconnaissance – Helicopter night landing and vehicle operations – Navigation – Deep sea low light inspection – Surveillance of borders, factory perimeters – Low intensity X-ray fluoroscopy.

These tubes can be manufactured with different spectral responses, including ultraviolet, and different target spacings. Specific enquiries are invited.

Size	Nominal image diagonal	Type	Description
55 mm	40 mm	<b>P8040</b>	High sensitivity, ruggedized tube with plain glass faceplate and close spaced target suitable for medical applications. It is particularly suitable where high performance from a small camera is required.
55 mm	40 mm	<b>P8040-UV</b>	P8040 with special faceplate and photocathode for ultraviolet operation.
55 mm	40 mm	<b>P8041</b>	High sensitivity, ruggedized tube, identical with P8040 but with fibre-optic faceplate.
55 mm	18 mm	<b>P8042</b>	Similar to P8040 but designed to use 18 mm optical image format.
3-inch	40 mm	<b>P880</b>	High sensitivity tube, externally similar to image orthicon; most image orthicon cameras can readily be modified to accept it.

## Focus and Deflection Yokes

Type	Description
<b>MA355A</b>	Combined focus and deflection yoke for use with 55 mm Image Isocons P8040 and P8041.
<b>MA517A</b>	Combined focus and deflection yoke for use with the range of standard 1-inch Vidicons.
<b>MA561A</b>	Combined focus and deflection yoke for special vidicons such as P8214 and P8254, and Silicon Intensifier Target tubes.
<b>MA584A</b>	Combined focus and deflection yoke for use with $\frac{2}{3}$ -inch Vidicon P8037.
<b>MA584D</b>	Combined focus and deflection yoke for use with short $\frac{2}{3}$ -inch Vidicons such as P8250.
<b>MA671A</b>	Combined focus and deflection yoke for 30 mm Leddicons in CCTV, surveillance and industrial applications.
<b>MA809A</b>	Combined focus and deflection yoke for use with $1\frac{1}{2}$ -inch Vidicons such as 8521.
<b>MA957A</b>	Combined focus and deflection yoke for use with high resolution vidicons such as P8126 and P8203.
<b>MA2050A</b>	Combined focus and deflection yoke for use with standard 1-inch Vidicons, especially rugged types such as P863, and with 1-inch Pyro-electric Vidicons such as P8092 and P8093.
<b>MA2051A</b>	Combined focus and deflection yoke for short, rugged 1-inch Vidicons such as P8129, P8201, P8202 and P8208.

## Shutter Tubes

Electrostatically focused image converters with electrostatic deflectors, able to operate in framing or streak mode. P855 and P8307 incorporate a fine mesh accelerator which can be used for gating and to reduce time resolution. Standard output phosphor is P11 for P855 and P856, P20 for P8307 series; P46 and P47 phosphors are available to special order. All tubes have sapphire input and fibre-optic output windows.

Useful screen area (mm)	Type	Structure	Equivalent background illumination (max) (lux)	Static resolution (min) (line pairs/mm)	Photo-cathode	Operating voltage (kV)	Application
65 x 40	<b>P855A</b>	Tetrode	$2 \times 10^{-5}$	16	S20	16	For sweep or framing operation, capable of 10 picosecond time resolution
65 x 40	<b>P855B</b>	Tetrode	$2 \times 10^{-5}$	16	S25	16	
65 x 40	<b>P855C</b>	Tetrode	◆	16	S1	16	
65 x 40	<b>P8307A</b>	Tetrode	$1 \times 10^{-5}$	18	S20	18	For sweep operation;
65 x 40	<b>P8307B</b>	Tetrode	$1 \times 10^{-5}$	18	S25	18	capable of 2 picosecond time resolution
65 x 40	<b>P8307C</b>	Tetrode	▲	18	S1	18	
70 x 40	<b>P856A</b>	Triode	$1 \times 10^{-5}$	16	S20	18	For sweep or framing operation;
70 x 40	<b>P856B</b>	Triode	$1 \times 10^{-5}$	16	S25	18	used in J. Hadland 790 camera *
70 x 40	<b>P856C</b>	Triode	◆	16	S1	18	
70 x 40	<b>P8307D</b>	Tetrode	$1 \times 10^{-5}$	18	S20	18	For sweep or framing operation;
70 x 40	<b>P8307E</b>	Tetrode	$1 \times 10^{-5}$	18	S25	18	capable of 2 picosecond time resolution
70 x 40	<b>P8307F</b>	Tetrode	▲	18	S1	18	

† Specific tube grades and electrical parameters can be negotiated.

■ Made to special order only.

◆ Equivalent background noise  $3 \times 10^{-12} \text{ A/cm}^2$  max.

▲ Equivalent background noise  $5 \times 10^{-12} \text{ A/cm}^2$  max.

\* Available from John Hadland Ltd., Newhouse Laboratories, Bovingdon, Herts.

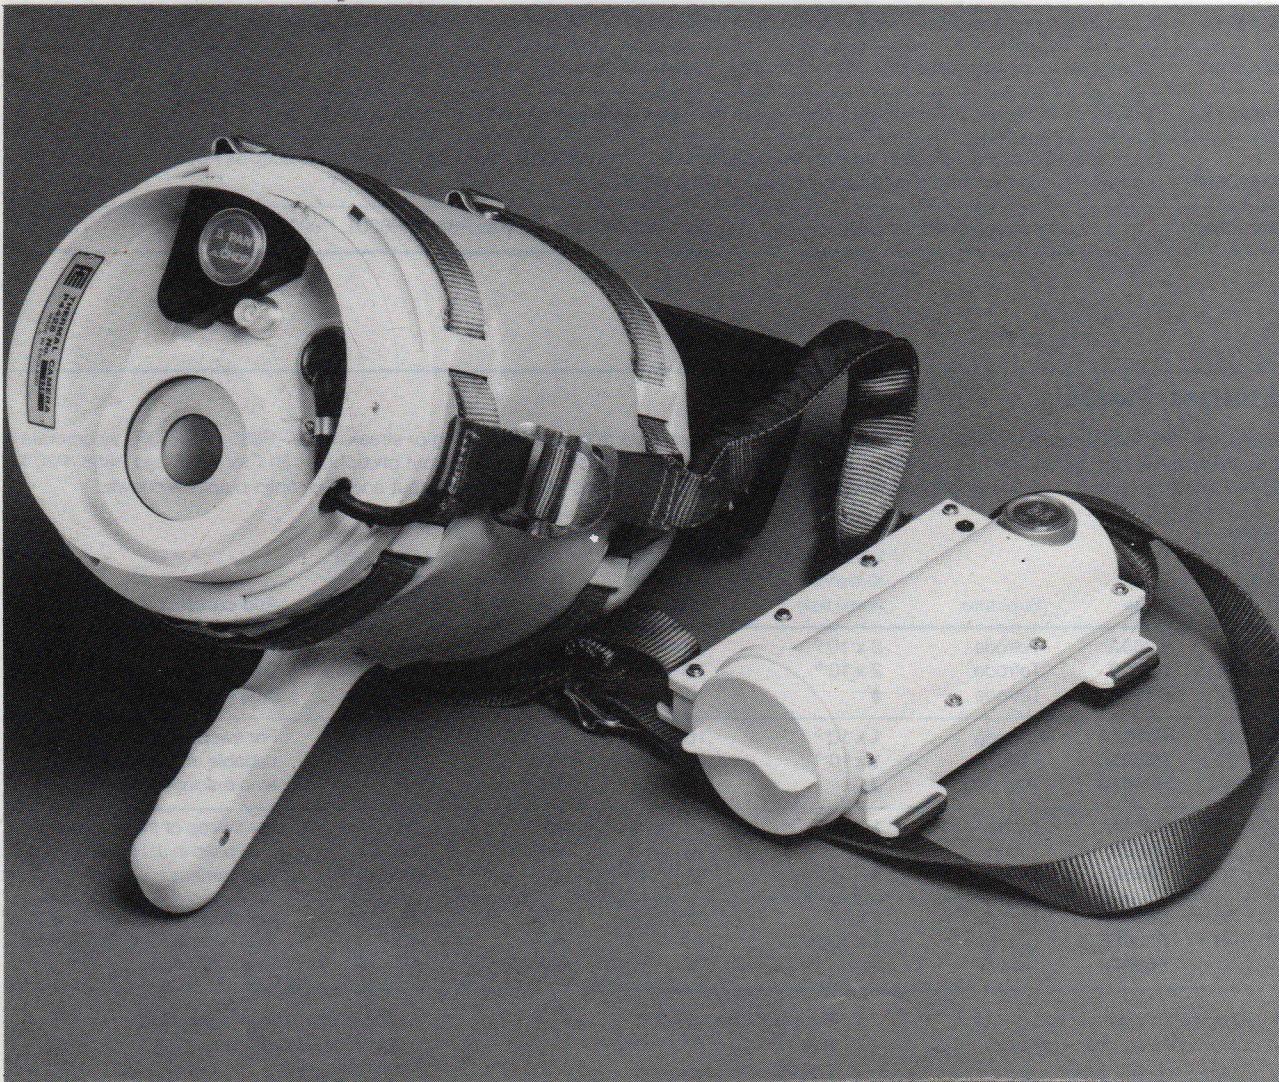

## Storage Tubes

Useful screen size	Type	Description	Typical luminance (cd/m <sup>2</sup> )	Deflection
4.0 inches (10.2 cm) dia.	<b>E713B (CV9422)</b>	Direct view storage tube recommended for radar applications under limited vibration conditions.	6200	Magnetic
4.0 inches (10.2 cm) dia.	<b>E723</b>	Direct view storage tube with two writing guns. Designed as a direct replacement for use in Phantom aircraft radar displays.	5000	Electrostatic
4.0 inches (10.2 cm) dia.	<b>E740</b>	Direct view storage tube with a central undeflected spot position. The tube is of ruggedized construction and encapsulated in a magnetic shield. Suitable for daylight viewing of airborne radar displays and other applications where vibration is encountered.	4500	Electrostatic

## Thermal Imaging Cameras

Type	Description
<b>P4428</b>	Portable, self-contained thermal imaging camera and monitor, battery powered. Engineered specifically for use by firefighting services in dense smoke. It is 11 inches long by 6½ inches diameter and weighs only 3 kg. P4428 supersedes type P4228.
<b>P4430</b>	Portable, self-contained thermal imaging camera and monitor based on the P4428. Engineered for applications which require interchangeable lenses with focal lengths from 25 to 75 mm. It is 11 inches long by 6½ inches diameter and weighs approximately 3 kg excluding lens.
<b>P4440</b>	Portable, self-contained thermal imaging camera and monitor using the P8220 pyroelectric vidicon. Designed as a lightweight hand held system with interchangeable lenses. It is 13 inches long by 3½ inches diameter and weighs approximately 2 kg excluding lens.
<b>P4450</b>	Thermal test pattern generator, designed to aid setup and servicing of thermal imaging cameras including P4228, P4428, P4430 and P4440. Switchable for use with 110 V, 60 Hz or 220 V, 50 Hz supply.

**Thermal Imaging Camera for Firefighting Applications**

## Image Intensifiers

Compact, rugged tubes for night vision and other low light level applications. All types incorporate a P20 type phosphor.

Useful diameter (mm)			Magnification (approx)	Typical luminance gain	Typical centre resolution (lp/mm)	Distortion (%)	Net weight (g)	Application
input	output	Type						
18	18	P8304A†	1.0	15 000	28	zero	105	Second generation intensifier to fit AN/PV5-5A goggles.
18	18	P8304B†	1.0	15 000	28	zero	100	Second generation intensifier for single tube goggles.
18	18	P8304C†	1.0	22 000	28	zero	185	Second generation intensifier for pocketscope.
18	18	P8304D†	1.0	30 000	28	zero	100	Similar to P8304B but giving a higher performance for use in armoured vehicle sights.
11	11	P8304E†	1.0	10 000	28	zero	98	Engineering grade second generation intensifier with 11 mm useful cathode diameter.
18	18	P8304F▷¶◆	1.0	10 000	32	zero	78	Second generation intensifier packaged to minimum size for goggles and ultra-lightweight weapon sights. Inverting output.
18	18	P8304J†	1.0	30 000	28	zero	210	Second generation proximity focus replacement for XX1500
18	18	P8514A▷¶◆	1.0	25 000	39	zero	78	Compact third generation intensifier for night vision goggles. Suitable for use in aircraft.
18	18	P8514EG¶◆	1.0	27 000	36	zero	78	Compact third generation intensifier for general applications including use in aircraft.
18	18	P8514FP¶◆	1.0	Up to 35 000	36	zero	85	Variable gain third generation intensifier. Plano input and output.
18	18	P8514KC▷¶◆	1.0	28 000	39	zero	98	Compact third generation intensifier for lightweight weapon sights.
18	18	P8514KE¶◆	1.0	27 000	36	zero	98	Third generation intensifier for general applications.
25►	25►	P8332	1.17	3000	40	8	1400	First generation intensifier with enhanced infrared response. Suitable for active use with IR searchlight.
25	25	P8073	0.95	100*	71	7	150	Pre-amplifier for intensified low light television.
25	25	P8079HP‡◆	0.84 to 1.0	70 000***	40	19	900	High performance replacement for first generation intensifiers, giving approx. 50% improvement in range.
25	25	P8079DC▲‡◆	0.94 to 1.0	70 000***	40	6	900	High performance replacement for first generation intensifiers, giving approx. 50% improvement in range and distortion free picture.

Tubes conforming to other requirements are also available.

## FLITE (Field and Laboratory Intensifier Test Equipment)

Type	Length (mm)	Width (mm)	Height (mm)	Net weight (kg)	Application
P4262	550	650	400	40	Testing of first, second and third generation image intensifiers.

► Approved to BS CECC (or pending).

► New type.

† Fibre-optic input and output, proximity focused intensifier with microchannel plate.

¶ Reduced veiling glare glass input, inverting fibre-optic output.

▲ Distortion Compensation incorporated.

◆ Flash Protection incorporated.

\* Single stage, fibre-optic input and output.

► Other formats are available.

\*\*\* Three stages, fibre-optic input and output.

‡ D.C. input voltage 6.75 V. Internal automatic brightness control.

## Charge Coupled Devices

Development of improved CCD image sensors continues. A revised type numbering system is used for the P85000/P86000 range of sensors; this identifies the main features of each device using the last four digits of the type number as follows:

P8 

### Scan system

- 5 = 525 lines
- 6 = 625 lines
- 7 = X-Y
- 0 = unspecified
- 1 =  $\frac{2}{3}$ -inch format, non anti-blooming (mask UT101)
- 2 =  $\frac{2}{3}$ -inch format, non anti-blooming (mask UT102)
- 3 =  $\frac{2}{3}$ -inch format, anti-blooming (mask UT102)
- 4 =  $\frac{1}{2}$ -inch format, anti-blooming (mask UT103)
- 5 =  $\frac{2}{3}$ -inch format, anti-blooming (mask UT104)

### Application

- 1 = bare die
- 2 = monochrome TV
- 3 = scientific
- 4 = Peltier cooled
- 5 = gen. 2 intensified
- 6 = unspecified
- 7 = gen. 3 intensified
- 8 = back illuminated
- 9 = unspecified

### Performance grade

- 1 = grade 1
- 2 = grade 2
- 3 = grade 3
- 5 = set-up grade

### Type

Mask UT101 has a 385 x 576-element array for 625-line operation, UT102 and UT103 have 385 x 576 (625-line) or 385 x 488 (525-line) arrays, and UT104 has a 578 x 576 (625-line) or 578 x 488 (525-line) array.

♦ Not electrically interchangeable with the corresponding new types.

◊ Image size on input of intensifier.

\* Image diagonal 15.3 mm, achieved by using both frame and store areas of the basic 10.6 mm device.

† Image diagonal 11.5 mm, achieved by using both frame and store areas of the basic 8 mm device.

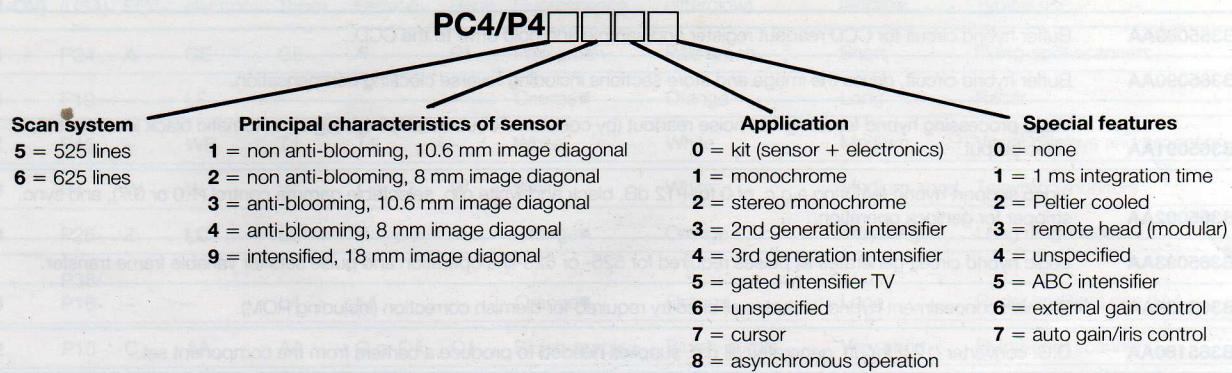

★ P40000 series *photon* cameras are designed to operate in harsh environmental conditions.

§ All cameras are available with dedicated 525-line sensor under appropriate type numbers.

■ New type. ■ Made to special order only.

## CCD Cameras – *photon* and Modular ranges

The main features of the *photon* range cameras are identified by the last four digits of the type number, as follows:

Enquiries are invited for applications not listed below.

### Type Description

**P46100\$** Kit camera, comprising CCD sensor and hybrid support electronics as required for particular application.

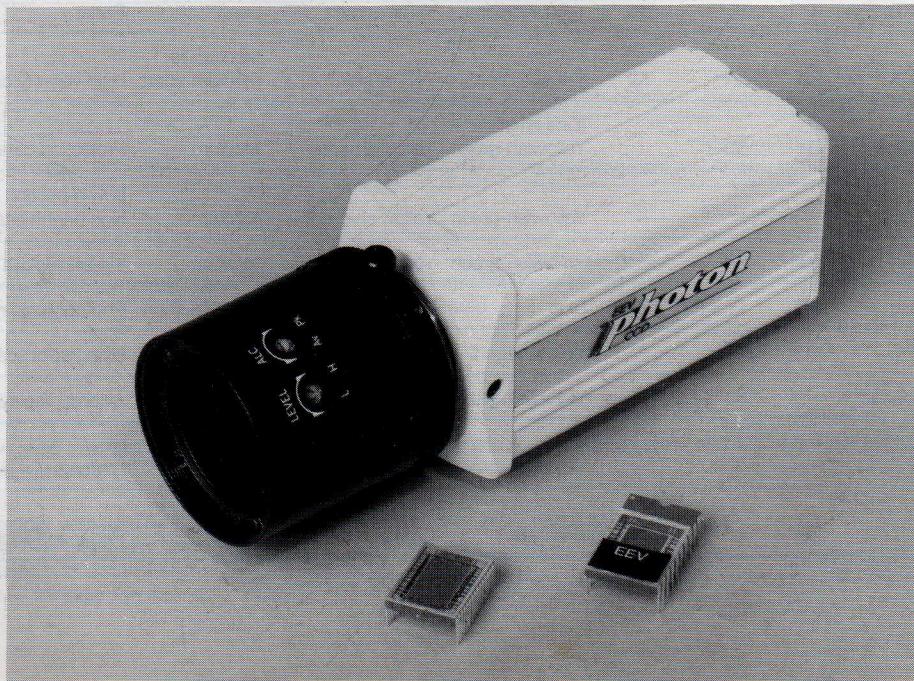

### *photon* CCD Cameras\*

- **P46310\$** General purpose monochrome TV camera with genlock. Image diagonal 10.6 mm, output 625 line CCIR.
- **P46311\$** General purpose monochrome TV camera with genlock and choice of TV or 1 ms integration time (switchable). Image diagonal 10.6 mm, output 625 line CCIR.
- **P46935\$** Low light level intensified CCD camera with 18 mm image diagonal on the intensifier input; automatic brightness control (ABC). Replaces P4321.
- **P46936\$** Similar to P46935 but with external gain control for scientific applications at low light levels.
- **P46937\$** Similar to P46935 but with automatic gain control and auto-iris for operation over a wide range of light levels.
- **PC46410\$** New *photon* CCD camera for use in surveillance and machine vision applications.
- **PC46411\$** Similar to PC46410 but with an electronic shutter giving 1 ms or standard TV field integration times.

### New Modular Range of CCD Cameras

- **P46312\$** Monochrome TV camera with Peltier cooled CCD permitting operation at high ambient temperatures or where long signal integration times are required.
- **P46323\$** Twin head monochrome TV camera for stereo imaging.
- **P46373\$** Cursor camera. Has electronically generated and controlled cursor lines for use in inspection applications.
- **P46953\$** Gated intensified CCD camera; exposure time variable from 1 ms down to 1  $\mu$ s. Conventional CCIR video output.
- **P46963\$** Gated intensified CCD camera using full-frame sensor. Incorporates frame store and signal processing.

### CCD Camera and Image Sensors

## CCD Support Components

Type	Description
ESB365089AA	Buffer hybrid circuit for CCD readout register and sample and hold drive to the CCD.
ESB365090AA	Buffer hybrid circuit, drives the image and store sections including reverse clocking compensation.
ESB365091AA	Video processing hybrid featuring low noise readout (by correlated double sampling), a.g.c., automatic black level control, video output.
ESB365092AA	Video support hybrid featuring a.g.c. of 0 to +12 dB, black and white clip, selectable gamma control (1.0 or 0.7), and sync. stripper for genlock operation.
ESB365093AA	Logic hybrid circuit generates all pulses required for 525- or 625-line operation and pulse sets for variable frame transfer.
ESB365139AA	Blemish concealment hybrid, includes all circuitry required for blemish correction (including ROM).
ESB365180AA	D.C. converter (12 V input), generates all d.c. supplies needed to produce a camera from the component set.

## Self-scanned Photodiode Array

The P87000 is a solid-state area image sensor comprising 125 x 125 photodiode-type sensing elements with associated scanning circuitry. Sample quantities are available for evaluation.

Type	Image size (mm)	Scan system	Frame rate	Packaging	Application
P87000	5 x 5	Serial X-Y 125 line	50 Hz typical	24 pin D.I.L.	Industrial imaging

## Cathode Ray Tube Phosphors

### Standard Coding for EEV Cathode Ray Tubes

The first one or two figures indicate the diameter or diagonal of the screen in cm.

The last two figures indicate the phosphor used, as in the following table.

The letter is a reference defining a particular tube design.

#### Examples:

2168A	304B
21	- 21 cm diagonal of screen
68	- phosphor code with aluminizing
A	- reference letter

3 - 3 cm diameter of screen

04 - phosphor code

B - reference letter

The phosphor code is normally omitted from the type number in data sheets and catalogues; thus 304B will be found in the 300B series data.

48	-	-	-	-	-	-	Red-infrared (800–900 nm)	Red-infrared	Short	Infrared display	
49	-	-	-	-	-	-	Red-infrared (700 nm)	Red-infrared	Short	Infrared display	

+ 50 The addition of 50 to any of the EEV phosphor codes above indicates an aluminized screen, e.g. phosphor no. 25 with an aluminized screen becomes phosphor no. 75.

- This screen is readily damaged by slow-moving traces of high brightness, and should not be used with a stationary trace. It is normally used for radar PPI display.

‡ Reduced-burn type phosphor.

■ New type.

☆ White: medium-short.

Tubes are normally supplied in compliance with a customer's detailed test specification.

Options available to order include: potted flying leads and connectors; permanently bonded mounting frame; potted deflection yoke; mumetal shielding; contrast enhancement filters; electromagnetic interference protection and anti-reflective coatings.

## Miniscan Remote CRT Display System

The MINISCAN display system comprises a CRT and a separate drive electronics/power unit, the two being connected by an umbilical cable up to 1000 mm in length.

Any CRT in the EEV range with electrostatic focus and deflection may be used.

The unit housing the drive electronics/power supply measures 175 x 150 x 107 mm and weighs 2 kg approx.

■ New type.  
★ Fibre-optic faceplate.

† These tubes can be supplied with any of the fine-grain phosphors available.  
Brightness will depend on phosphor type.

60 mm 2.36 inch	Single character 5 x 7 dot matrix, can be cascaded in multi-character displays. Serial interface, 4 - 10 V supply.	<b>117M</b>		54.6 x 100.3 x 8.5 mm 2.15 x 3.95 x 0.34 inch

## LUCID Custom Liquid Crystal Displays

A custom design service is available for displays incorporating special symbols, bargraphs or dot matrix formats.

Max size (mm)	Technology	Timescale (typical)
154 x 143	Twisted nematic or guest-host	Samples 8-10 weeks Production 12 weeks from sample approval

## Character Display Tubes

EEV has developed 7-segment numeric and 7 x 5 matrix alpha-numeric character tubes with displays in white, red, blue, yellow or green; special characters can also be supplied. The power supply is 12 V d.c., all necessary conversions being carried out within the tube package, and the display can be switched rapidly by low level CMOS logic.

Character size (mm)	Type	Type of display	Typical power consumption (W)	Typical peak luminance (cd/m <sup>2</sup> )	Switching voltage (V)
90 x 55	E727■	7-segment	2	3400 (green)	5.0

## Concentrated Arc Lamps

A range of high brightness point sources for a variety of applications. Concentrated arc lamps radiate light of very stable colour temperature (3200 K) and are available with power ratings from 2 to 300 W and source diameters from 0.18 to 2.79 mm (0.007 to 0.110 inch).

Type	Power input (W)	Operating voltage (V)	Starting voltage (V min)	Source diameter (mm)	Average luminance (cd/m <sup>2</sup> )	Bulb type	Base

## Spark Gaps

EEV manufactures a comprehensive range of spark gaps for ignitor applications, d.c. protection, heavy current applications and for the protection of pulsed circuits. Each of the styles listed below comprises a series of spark gaps with breakdown voltages covering the specified range. Customers' enquiries for spark gaps to suit individual requirements are invited.

Series	Number of electrodes	Range of breakdown voltage (kV)	Cumulative charge rating (coulombs)	Connections/mounting
<b>GX2001</b>	2	3.0–50 (d.c.)	8000	Screw mounted
<b>GX2001A</b>		2-electrode spark gap similar to type GX2001 but with the facility for the user to adjust the d.c. breakdown voltage over a wide range.		
<b>GX3002</b>	3	5–60	1500	Screw and flying lead. Integral trigger transformer
<b>GXA</b>	2	5–16 (pulsed d.c. over a range 1000–1200 p.p.s.)	100	CT2 end cap and octal base
<b>GXB</b>	2	5–16 (pulsed d.c. over a range 1000–1200 p.p.s.)	100	CT2 end caps
<b>GXC</b>	2	0.5–30 (d.c.)	100	Flexible leads
<b>GXE</b>	2	0.5–6.0 (d.c.)	50	Flexible leads
<b>GXF/C</b>	2	0.25–40 (d.c.)	20 000	Bolt on
<b>GXF/G</b>	2	0.25–25 (d.c.)	20 000	Bolt on
<b>GXG</b>	3	15–50 (d.c.)	8000	Screw mounted
<b>GXH</b>	2	0.5–6.0	600	6BA and 9.5 mm cap
<b>GXK</b>	2	0.4–8.0 (d.c.)	50	CT1 end caps
<b>GXL</b>	3	0.4–12 (d.c.)	10	CT1 end caps
<b>GXM</b>	2	0.25–4.5 (d.c.)	40	Flying leads
<b>GXMT</b>	3	0.5–10 (d.c.)	50	CT1 end cap and leads
<b>GXN</b>	2	0.4–8.0 (d.c.)	400	CT1 end caps
<b>GXP</b>	2	0.4–8.0 (d.c.)	50	Stud and CT1 end caps
<b>GXQ</b>	3	0.4–65 (d.c.)	1000	Screw mounted
<b>GXR</b>	2	0.4–8.0 (d.c.)	400	Stud and CT1 end cap
<b>GXS*</b>	2	0.5–3.0	10	Stud mounted
<b>GXT</b>	3	15–45	1500	Screw mounted
<b>GXV</b>	2	0.4–8.0 (d.c.)	400	Stud mounted
<b>GXW</b>	2	0.4–40 (d.c.)	1000	Screw mounted
<b>GXX</b>	2	8.0–50 (d.c.)	75	Stud mounted
<b>GXY</b>	2	0.5–15 (d.c.)	400	Screw mounted
<b>GXZ</b>	2	0.4–3.0 (d.c.)	10	Flexible leads
<b>QT1259</b>	3	23–27	1500	Flange and leads
<b>QT1259P</b>		3-electrode spark gap similar to QT1259 but with an integral trigger transformer. The spark gap can be triggered by a trigger voltage of 250 V discharged from a 0.47 $\mu$ F capacitor.		
<b>TGF</b>	3	16–45		Screw mounted

\* For use under conditions of high dv/dt; typical impulse ratio 1.5 at 100 kV/ $\mu$ s.

→ New type.

## Trigger Transformers for Spark Gaps

Type	Description
MA785A	A compact pulse transformer designed to provide 30 kV pulses, at a rate of rise of 30 kV/ $\mu$ s, suitable for triggering spark gaps. It has a voltage transformation ratio of 150:1 and gives a peak output current of 1.0 A. The device will withstand shock acceleration up to 981 m/s <sup>2</sup> (11 ms half sine) and vibration acceleration up to 96.6 m/s <sup>2</sup> (20 Hz to 500 Hz).
MA819A	A small pulse transformer designed to provide fast rise time, positive or negative 20 kV pulses, suitable for triggering spark gaps. It has a voltage transformation ratio of 100:1 and a maximum peak output voltage of 25 kV.
MA2162A	A compact trigger transformer designed to provide fast rise-time, positive or negative, high voltage pulses, suitable for triggering spark gaps. Its main feature is a primary to secondary insulation greater than 40 kV. The transformation ratio is 50:1.

## Triggered Vacuum Gaps

Type	Number of electrodes	Range of breakdown voltage (kV)	Cumulative charge rating (coulombs)	Connections/mounting
TVG1	3	0.5–20	40	CT1 cap and flexible lead
TVG4	3	0.3–3.0	0.05	Flexible leads

## EBW Devices

EEV produces Detonators, Squibbs and Triggered Vacuum Gaps for exploding bridge wire (EBW) circuits. These devices are produced to exacting safety standards.

## Transient Protection Units (TPU) for EMP

A series of fast reaction transient protection units designed to protect electrical and electronic equipment from EMP induced transients. The units will also protect against lightning and other switching transients.

Type	Transient energy handling capability	Areas of application
TPU1	10 J	Antenna protection up to v.h.f.
TPU3	100 J	Low power mains equipment.
TPU4	20–200 kJ	Mains busbar installations.
TPU7 TPU7A	10J	Equipment connected to communication lines.
TPU7P	30J	Signal control lines, d.c./a.c., 60 A max.
TPU8 TPU8A	Similar to TPU7 and TPU7A but with hexagonal body section for clamping purposes.	

## Ozotron – Halogen Sensitive Element

The Ozotron will detect minute quantities of halogen gases in the atmosphere. Sensitivity is dependent upon the gas being measured. Freon 12 (dichlorodifluoromethane) is given as an example in the following table.

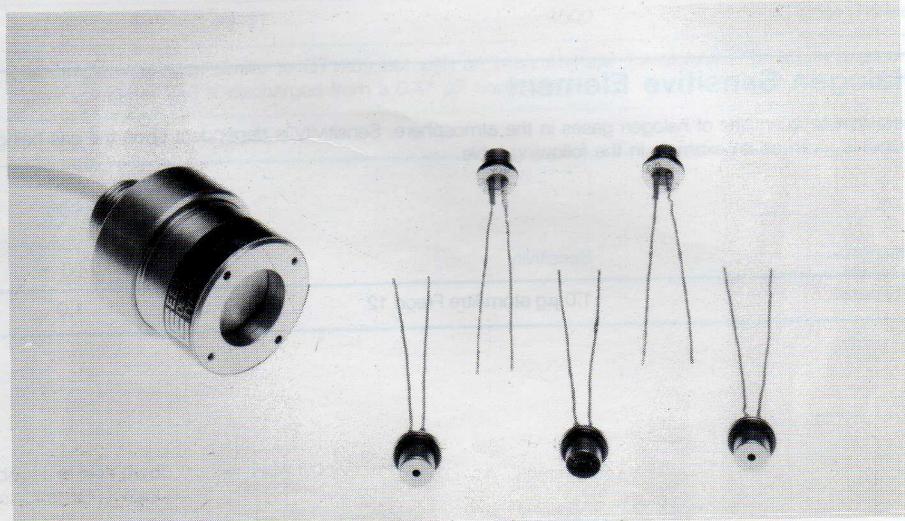

Type	Description	Sensitivity	Typical heater supply		
			Current (A)	Voltage (V)	Typical h.t. voltage (V)
K	B7G base	1.0 $\mu$ g atom/litre Freon 12	5.0	1.0	200–250

## Combustible Gas Detector Elements

The detectors listed below consist of two elements which are used as two arms of a bridge circuit. They are designed to detect methane in air in concentrations from 0.1% upwards. There is no interference from water vapour or carbon dioxide. The minimum sensitivities specified apply when the recommended circuit and mounting are used.

Type	Minimum sensitivity (mV/% methane)	Linearity (% methane)	Response time (sec)★	Maximum methane concentration (%)	Bridge supply (V)	Maximum bridge power consumption (W)
VQ1	20	up to 3	2	10	2.0 ± 0.1	0.75
VQ2	15	up to 3	2	5	2.0 ± 0.1	0.48
VQ3	20	up to 3	2	6	2.5 ± 0.1	1.1
VQ4◊	20	up to 3	2	10	2.0 ± 0.1	0.75
VQ5	A pair of inactive elements for use in detecting up to 100% concentration of gas.					2.0 ± 0.1
VQ6	A pair of inactive elements for use in detecting up to 100% concentration of gas.					0.48
VQ8	Similar drive requirements to VQ3 but with improved resistance to poisoning from lead bearing vapours.					
VQ9	15	up to 3	2	5	2.0 ± 0.1 or 175 mA	0.48
VQ10	15	3	2	5	2.0 ± 0.1	0.48
VQ11	For use where exposure to concentrations of gas up to 100% may occur, the detection of combustible gases containing halogens, or when small amounts of non-flammable hydrocarbons are present.					
VQ16	For use in atmospheres where traces of silicone poisoning agents may be present; similar drive requirements to VQ3.					
VQ17◊	20	up to 3	2	6	2.5 ± 0.1	1.1
VQ21★	10	up to 3	2	5	2.0	0.75
VQ21T★	18	up to 3	2	5	2.0	0.75
VQ22★	10	up to 3	2	5	2.0	0.48
VQ22T★	15	up to 3	2	5	2.0	0.48
VQ23★	10	up to 3	2	5	2.5	1.1
VQ23T★	18	up to 3	2	5	2.5	1.1
VQ24	30	up to 3	2	5	3.5	0.36□
■ VQ25★	Similar to VQ11 but with improved resistance to poisoning.					
■ VQ27★	10	up to 3	2	5	2.5	1.1
■ VQ28◊	20	up to 3	2	5	2.0 ± 0.1	0.48
VQ4250	Sealed, stainless-steel detector head with a stainless-steel filter; it can be supplied fitted with any of the EEV range of gas sensing elements together with the appropriate trimming resistor. The head has an integral 3-core cable for termination in a junction box or similar facility. Complies with the requirements of BASEEFA Standard SFA 3009: 1972 and BS5501 Parts 1 & 5: 1977 for Group IIC gases (excluding ethyl nitrate).					
■ VQ4250EA	Similar to VQ4250 but also has CSA approval Class 1 Groups A, B, C and D.					

Detector Head VQ4250 with a range of Detector Elements

## Portable Gas Detection Instruments

A series of portable gas detection instruments has been introduced by EEV, each type having BASEEFA intrinsic safety certification Ex ib sd IIC T4 Certificate No. Ex 86427. Three types are designed for the detection of flammable gases, covering the range 0–100% L.E.L. (Lower Explosive Level) and the fourth, type GD4702051, is used for detecting hydrogen sulphide in concentrations from 0 to 100 p.p.m.

GD4701002 incorporates EEV sensor type VQ2, giving approximately 16 hours of battery life; GD4701024 employs the low power consumption element VQ24, with an extended battery life of about 28 hours.

GD4701022 has a low power poison resistant flammable gas sensor which, whilst still able to give more than 16 hours continuous operation from a fresh, fully charged battery, is able to withstand silicone (hexamethyldisiloxane) HMDS poisoning for up to 15 times longer than the equivalent standard low power gas sensor.

Calibration and the two alarm levels are push button set and the calibration and alarm information is digitally stored, thus eliminating drift in the settings. Fault monitoring and battery condition monitoring are part of the continuous self-checking process performed during operation of the instrument.

LED displays and lamps provide a wide range of messages and diagnostic facilities in addition to the normal gas concentration values.

Each instrument is contained within an ABS case with the on/off switch and displays on the front panel and the calibration housing and battery charger socket on the rear panel.

Accessories available for use with the instrument include a mains powered battery charger GDA47001BC designed specifically for this application, calibration caps, sampling probes and aspirators.

### Portable Gas Detection Instrument GD4701002

### Electrometer Triode

Subminiature electrometer triode for linear and logarithmic use, with a controlled relationship between positive grid current and anode current. Connections are by flying leads.

Type	Anode voltage max (V)	Anode current max ( $\mu$ A)	Grid current (A)	Mutual conductance ( $\mu$ A/V)	Amplification factor	Filament voltage (V)	Filament current (mA)
B1628	25	250	$3 \times 10^{-15}$	80	2.0	1.25	14

► New type.

◊ Two elements supplied on a single mount.

★ Time to register 1½% in a 2½% concentration.

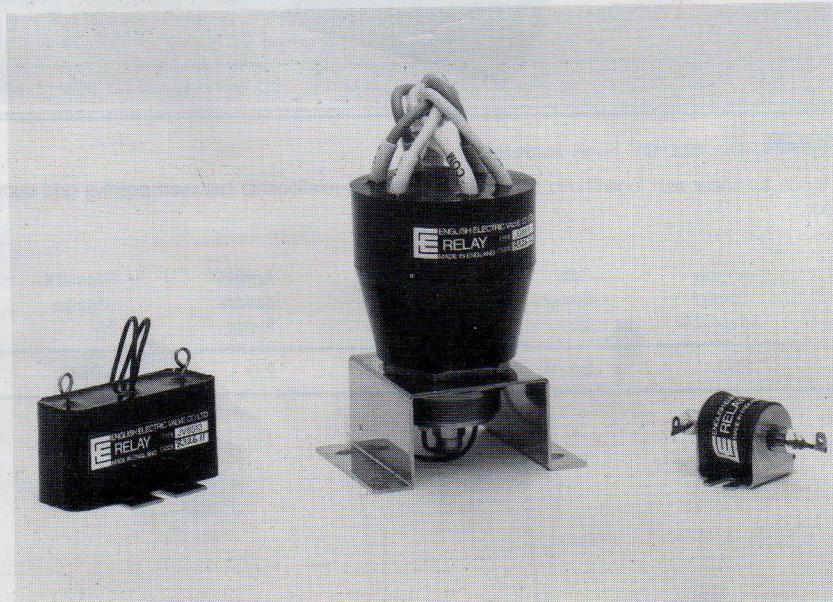

★ This type has improved resistance to the poisoning effects of silicone vapours.

□ Maximum sensor dissipation.

## Vacuum and Gas-filled Relays

Type	Description	Contact ratings		Coil		Net weight (g)
		Voltage (kV)*	Current (A)**	Voltage (V)	Resistance (Ω)	
JG6511	Gas filled, general purpose double pole double throw relay. Flexible lead connections to coil and contacts.	7.5	30	12	10.8–13.2	250
JG6511N	Gas-filled, general purpose double pole, double throw relay. Solder terminal connections to contacts.	7.5	30	12	10.8–13.2	250
JG6511R	Gas-filled, general purpose double pole, double throw relay. Fitted with UL and CSA approved leads.	7.5	30	12	10.8–13.2	250
JG6514A	Single-pole, normally open gas-filled relay for capacitor discharge circuits in laser equipment.	30	30	12	21.6–26.4	250
JG6514B	Single-pole, normally open gas-filled relay for capacitor discharge circuits in laser equipment.	30	30	26.5	90–110	250
JG6516A	Single-pole, normally closed gas-filled relay suitable for use as a safety 'dump' switch.	30	10	26.5	90–110	300
JG6517A	Single-pole, normally closed gas-filled relay suitable for use as a safety 'dump' switch.	30	30	26.5	90–110	250
JG6518	Single-pole, normally closed gas-filled safety 'dump' relay for extreme environmental conditions.	40	10	26.5	90–110	300
JG6521	Single-pole, normally open gas-filled relay, ceramic/metal construction, for high voltage capacitor discharge circuits.	40	30	26.5	90–110	400
JG6522	Single-pole, normally closed gas-filled relay, ceramic/metal construction for use as a reliable safety 'dump' switch.	40	30	26.5	90–110	400
JV6512	Single pole double throw vacuum relay.	5.0	10	12	90–110	25
JV6513	Single pole normally closed vacuum relay, suitable for 'dump' service in medical and laser safety interlocks.	10	5.0	12	90–110	60
JV6513B						

Relays JV6513, JG6511, JV6512

\* Max peak, d.c. or 50 Hz.

\*\* Continuous, d.c. or 50 Hz.

■ New type.

## THE WORLD'S FINEST GIANT COLOUR VIDEO DISPLAY SYSTEM

**S**tarvision is the world's finest giant screen colour matrix television and information display system. With permanently-installed and mobile systems sold and in service at major international events, Starvision is setting new and higher standards for picture quality and brilliance and for efficiency and reliability.

Starvision's outstanding performance is made possible by the unique and highly efficient column display cathode ray tubes developed and manufactured by EEV. These provide Starvision with its unrivalled combination of brilliant pictures with excellent definition, long life and low power consumption.

Colour and action in television pictures are reproduced with excellent colour fidelity, high brightness and without any visible flicker or blurred or persistent images. This performance is maintained under the widest range of operating conditions, from bright daylight to darkest night, in summer or winter, indoors or out.

Computer-generated graphics, animation, alphanumeric messages, scores and other information can also be displayed equally brilliantly by Starvision either simultaneously with television pictures or separately.

## Cartes Postales

Nous nous efforçons de tenir à jour notre liste de correspondants et serons heureux de votre coopération afin de conserver à vous rendre service. Veuillez nous renseigner sur les dernières nouveautés dans nos produits EEV.

from component kit or complete unit.

## THE CLEAR LEADER

**C**ompared with other matrix display systems Starvision offers:

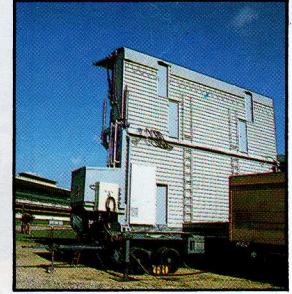

Higher definition - Starvision's picture element density is greater by up to three times. This means viewers are provided with sharper and more detailed images.

Bright colour - Starvision has been designed for viewing in full daylight. Colour fidelity is excellent and is maintained accurately over a full range of brightness levels for all conditions from night time operation up to the fullest daylight.

Low power consumption - Starvision's power consumption is as little as 5% of that of competing systems. Therefore, unlike other systems, Starvision has no heat dissipation problems. Power supply installation costs are held down and there are no noisy cooling fans.

Compactness and mobility - Starvision's unique design provides a screen which is light in weight and occupies a minimum of space. Fully mobile systems are available, offering the largest self-contained mobile colour matrix screens in the world. They can be up to 6 metres (19 feet 10 inches) high and 8 metres (26 feet 8 inches) or more wide. Displays for fixed installation can be made exactly to the sizes which meet your needs.

Reliability and ease of servicing - Starvision's design keeps servicing and maintenance to a minimum by the use of durable components and materials and by making servicing and fault rectification as simple as possible.

## WHAT CAN STARVISION DO FOR YOUR BUSINESS?

**S**tarvision can dramatically improve the entertainment for viewers and provide them with the information they need. Examples of the service which Starvision can provide are:

### TELEVISION COVERAGE

Live coverage of events  
Action replays (slow-motion, freeze-frames...)  
Replays of earlier events  
The day's highlights  
Personality presentations and interviews  
Competitor parades  
Presentations  
TV advertising

### DATA DISPLAY

Event timing and scoring  
Venue records and statistics  
Competitors' details  
Statistics and results  
Advertising messages  
Attendance figures  
Coming events

# EQUIVALENTS INDEX

This index lists tubes of various manufacturers for which EEV tubes may be used as replacements. CV and NATO type numbers are also included.

The types listed in the column 'EEV replacement' may be used as direct replacements for those under the heading 'Type to be replaced' except where indicated by an asterisk \* which means that minor modifications may be necessary because of slight mechanical or electrical differences. Details of these differences are available from EEV.

Where the symbol + appears in the column 'page number', abridged data for the tube are not given in this catalogue but enquiries are welcomed.

☆ Indicates manufacture at Chelmsford.

◊ Indicates manufacture at Witham.

▽ Indicates manufacture at Lincoln.

## Index d'équivalence des tubes

Cet index comprend les tubes de divers fabricants et pour le remplacement desquels il existe des tubes EEV. Les numéros des types CV et NATO sont également inclus.

Les types mentionnés dans la colonne 'EEV replacement' peuvent être utilisés directement pour le remplacement de ceux mentionnés sous le titre 'type to be replaced' sauf lorsque marqué d'un astérisque \* qui indique qu'il peut être nécessaire de procéder à une légère modification en raison d'une différence mineure mécanique ou électrique. Pour plus de détails de ces différences s'adresser à EEV.

Lorsque le symbole + est porté dans la colonne 'page number' les caractéristiques abrégées de ce tube ne sont pas données dans cet index mais nous répondrons à toute demande de renseignements.

Pour toutes les indications nous utilisons le code suivant:-

- ☆ produits fabriqués par Chelmsford.
- ◊ produits fabriqués par Witham.
- ▽ produits fabriqués par Lincoln.

## Liste Gleichwertiger Röhren

Diese Liste zeigt Röhren verschiedener Hersteller, welche durch Röhren von EEV ersetzt werden können. CV und NATO-Typennummern werden ebenfalls angeführt.

Die in der Spalte 'EEV replacement' angegebenen Typen können direkt als gleichwertiger Ersatz anstelle der Typen in der Rubrik 'type to be replaced' verwendet werden. Bei den mit einem Sternchen \* gekennzeichneten Typen können jedoch unbedeutende Abänderungen auf Grund von geringfügigen mechanischen oder elektrischen Unterschieden erforderlich sein. Näheres über diese Unterschiede ist bei EEV erhältlich.

Das Symbol + in der Spalte 'page number' bedeutet, daß für die entsprechende Röhre in diesem Katalog keine Kurzdaten angeführt sind. Anfragen zu diesen Röhren sind uns jedoch willkommen.

Die folgende Zeichnung wird für die Daten verwendet:

- ☆ Produkt der Chelmsford.
- ◊ Produkt der Witham.
- ▽ Produkt der Lincoln.

## Indice de intercambiabilidad

En este índice se da una relación de lámparas electrónicas de diversas marcas para las que se pueden utilizar como repuesto las lámparas EEV. Asimismo, se incluyen los números CV y NATO.

Los tipos que figuran en la columna 'EEV replacement' pueden utilizarse directamente como repuestos de los detallados bajo el epígrafe 'type to be replaced' excepto cuando vayan acompañados de un asterisco \*, el cual indica que pueden ser necesarias pequeñas modificaciones debido a ligeras diferencias de orden mecánico o eléctrico. Se puede obtener detalles de estas variaciones de EEV.

El símbolo + en la columna 'page number' significa que no se facilita en este Catálogo un resumen informativo sobre la lámpara, pero se suministran con el mayor gusto los datos procedentes, a solicitud del interesado.

En todo lugar se ha utilizado la siguiente clave:-

- ☆ indica fabricado por Chelmsford.
- ◊ indica fabricado por Witham.
- ▽ indica fabricado por Lincoln.

## Indice degli equivalenti

Il presente indice elenca le valvole costruite da altre società che possono venire sostituite dalle valvole EEV.  
La distinta elenca parimenti i numeri CV e NATO.

I modelli figuranti nella colonna 'EEV replacement' possono venir usati a sostituzione diretta dei modelli elencati sotto la dicitura 'type to be replaced', eccettuato il caso in cui figuri l'asteristico \*; in detto caso, occorre apportare lievi modifiche per compensare leggere diversità meccaniche o elettriche. Per ottenere particolari di queste differenze rivolgersi a EEV.

Dove appare il simbolo + nella colonna 'page number', non vengono forniti i dati abbreviati inerenti la valvola; in tal caso, comunque, il cliente è pregato di interpellarci.

Nel presente opuscolo, si usa il seguente codice:-

- ☆ indica che la valvola è costruita dalla Chelmsford.
- ◊ indica che la valvola è costruita dalla Witham.
- ▽ indica che la valvola è costruita dalla Lincoln.
