CATHODE RAY TUBE

7-INCH RECTANGULAR, GLASS	FACE PLATE - SPHERICAL, CLEAR
FOCUS - ELECTROSTATIC	PERSISTENCE - LONG
DEFLECTION - ELECTROSTATIC	POST ACCELERATION
TWO GUNS	ALUMINIZED

=====DESCRIPTION AND RATING=====

The 7AKP19 and 7AKP25 are 4 by 6-inch rectangular faced cathode ray tubes with electrostatic-focus and deflection for radar and oscillographic applications that require a long persistence. They have two electron guns and use post-acceleration. A particular feature of the 7AKP25 is the phosphor which is more burn-resistant than that in the 7AKP19, and which eliminates the initial blue flash characteristic of the P7 phosphor.

GENERAL

Data and Ratings Are Per Gun Unless Otherwise Specified

ELECTRICAL

Heater Voltage 6.3 Volts
 Heater Current 0.6 \pm 10% Amperes

Focusing Method - Electrostatic
 Deflecting Method - Electrostatic

MAXIMUM CIRCUIT VALUES

Grid No. 1 Circuit Resistance 1.5 Max. Megohms

*The maximum ratings provide a ten-percent safety factor in accordance with the standard design-center system of rating cathode ray tubes. The tube will withstand the combined effects of variations in line voltage and components provided the maximum design-center values are not exceeded by more than ten percent.

#Anode, grid No. 2, and grid No. 4 which are connected together within the tube are referred to herein as anode.

##The phosphor screen may be damaged if the exciting current density is greater than 1.4 microamperes per square centimeter for the P25, and 0.06 microamperes per square centimeter for the P19.

**For visual extinction of focused undeflected spot.

+The design-center positions of the undeflected spots are located $\pm 1/2$ inch from the center of the tube face on a vertical line through the center of the face.

++ Measured in accordance with specification MIL-E-1C paragraph 4.12.6.1 at an anode No. 3 (post-accelerator anode) current of 2.0 microamperes d-c.
