## AMPEREX TUBE TYPE 8117

### TENTATIVE DATA

The 8117 is a dual tetrode tube designed for use as a high efficiency linear amplifier in single sideband systems. Each anode is capable of dissipating 30 watts continuously. The cathode is indirectly heated, oxide coated. Maximum ratings apply as indicated below up to 60 and 175 megacycles.

### GENERAL CHARACTERISTICS

#### MECHANICAL

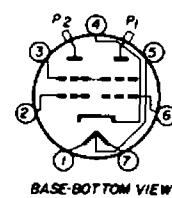

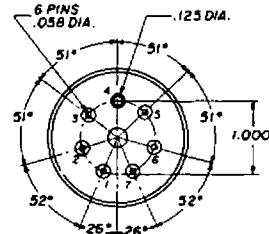

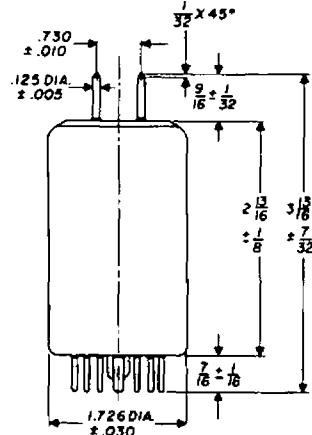

Mounting Position Vertical, base up or down. Horizontal with anode pins in a horizontal plane.

Maximum Glass and Seal Temperatures 250°C

#### Accessories

Socket Johnson 122-105 or equal

Net Weight, Approx. 2.5 ounces

1. Either forced air cooling or heat sink cooling may be used when the tube is operating at or near the maximum ratings. With forced air cooling it is necessary to cool both the lateral bulb surfaces as well as the plate pin seals by directing the flow of air toward the top and sides of the bulb. In most cases approximately 20 cfm is sufficient. However, regardless of the type of cooling being used, the degree of cooling should be determined by direct temperature measurement of both the seals and the bulb.

The temperature may be measured by means of temperature sensitive compound such as Tempilaq made by the Tempil Corporation, 11 West 25th Street, New York, New York.

PIN 1 - HEATER  
PIN 2 - GRID NO.1 OF UNIT NO.2  
PIN 3 - GRID NO.2  
PIN 4 - CATHODE B INTERNAL SHIELD  
PIN 5 - HEATER CENTER TAP  
PIN 6 - GRID NO.1 OF UNIT NO.1  
PIN 7 - HEATER  
P1 - PLATE OF UNIT NO.1  
P2 - PLATE OF UNIT NO.2

## ELECTRICAL

### Heater Voltage

Series	12.6 volts
Parallel	6.3 volts

### Heater Current

Series	0.9 amps
Parallel	1.8 amps

### Amplification Factor

$G_1 - G_2$  Mu at  $E_b = 600$  volts

$E_{C_2} = 250$  volts,  $I_b = 40$  ma

### Peak Cathode Current

700 ma

### Direct Interelectrode Capacitances

	Per Unit	
	Min.	Max.
Grid to Plate		0.09 pf
Input	9.4	11.8 pf
Output	2.6	3.7 pf
